# AIE + Ovsynch is an effective strategy to manage 2+ AI

**Effective strategy but may not optimize reproductive performance and management!**

**Maximize  
Fertility**

**Minimize  
interbreeding  
interval**

**Treatments for 2+ AI  
Based on Ovarian Status**

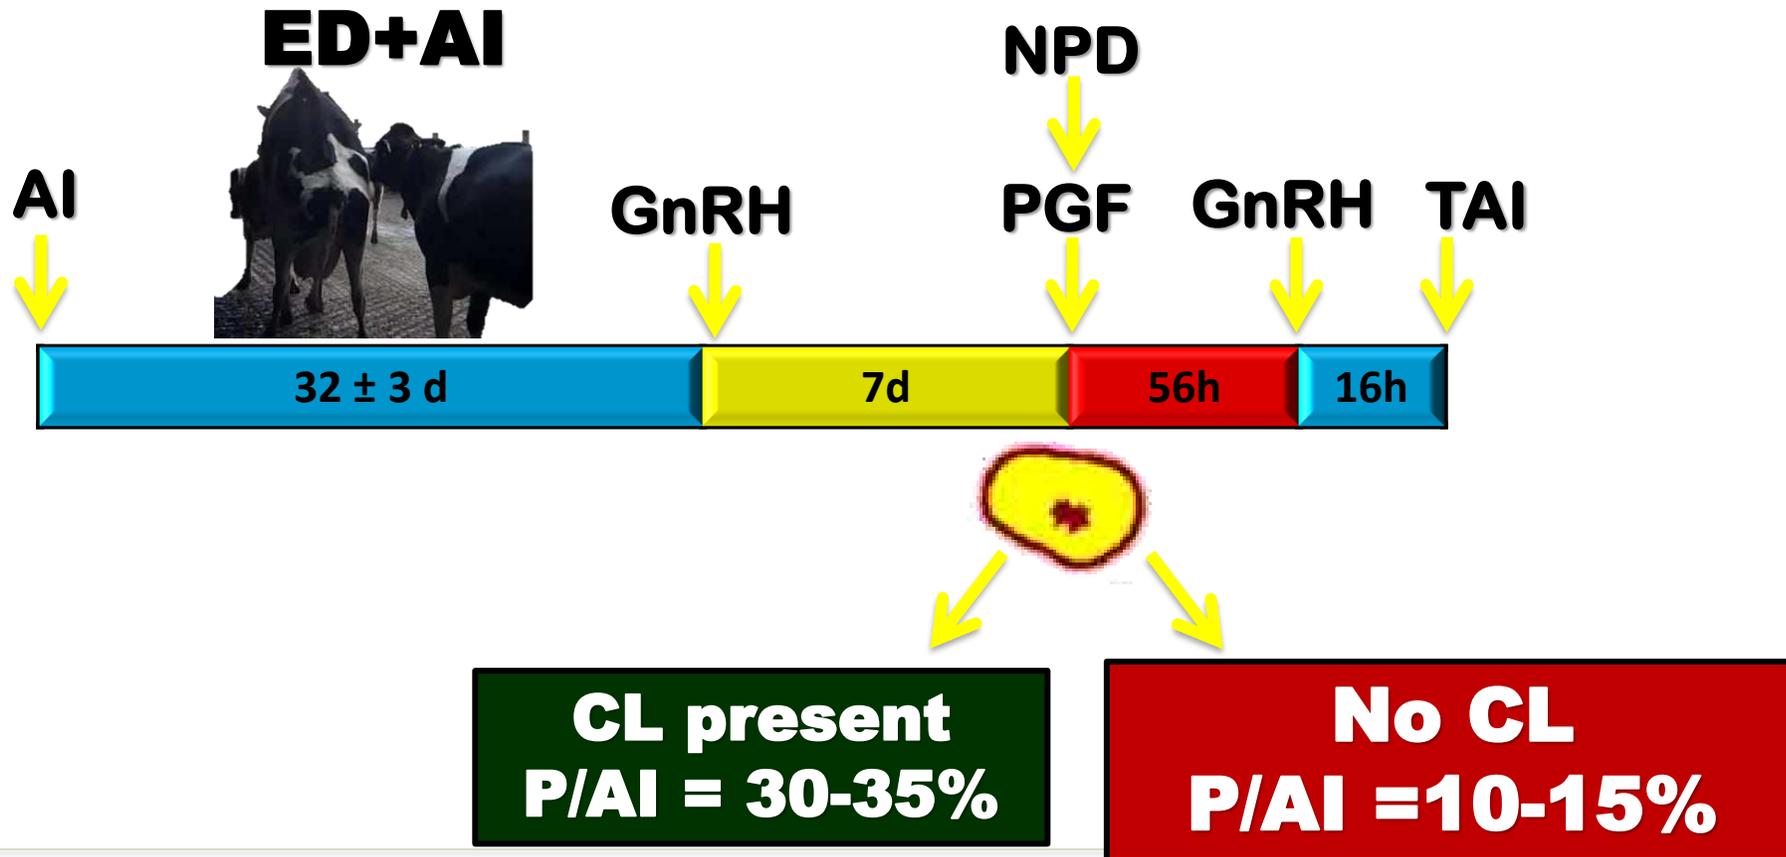

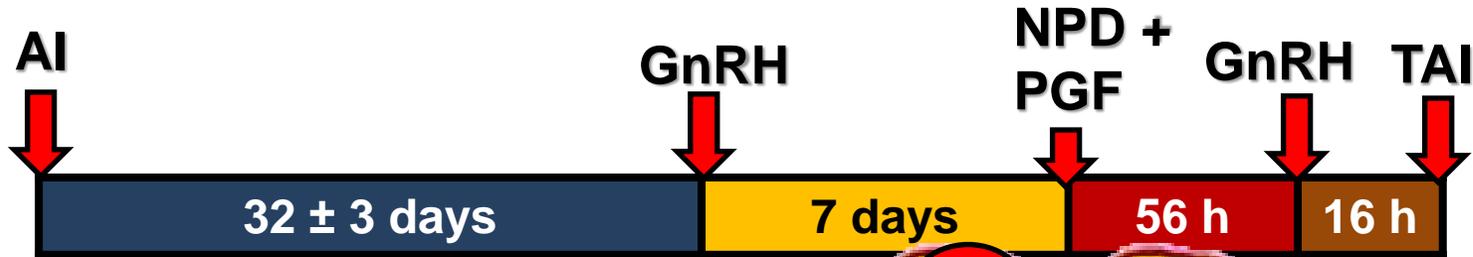

# Treatments for 2+ AI Based on Ovarian Status

- ✔ Improve P/AI of cows with no CL at GnRH or PGF of Resynch
- ✔ Reduce interbreeding interval without interfering with AI at detected estrus (AIE) + increase fertility
- ✔ Maximize insemination of cows at detected estrus through induction of estrus after non pregnancy diagnosis (NPD)

# Reassignment of Cows with NoCL at PGF of Resynch

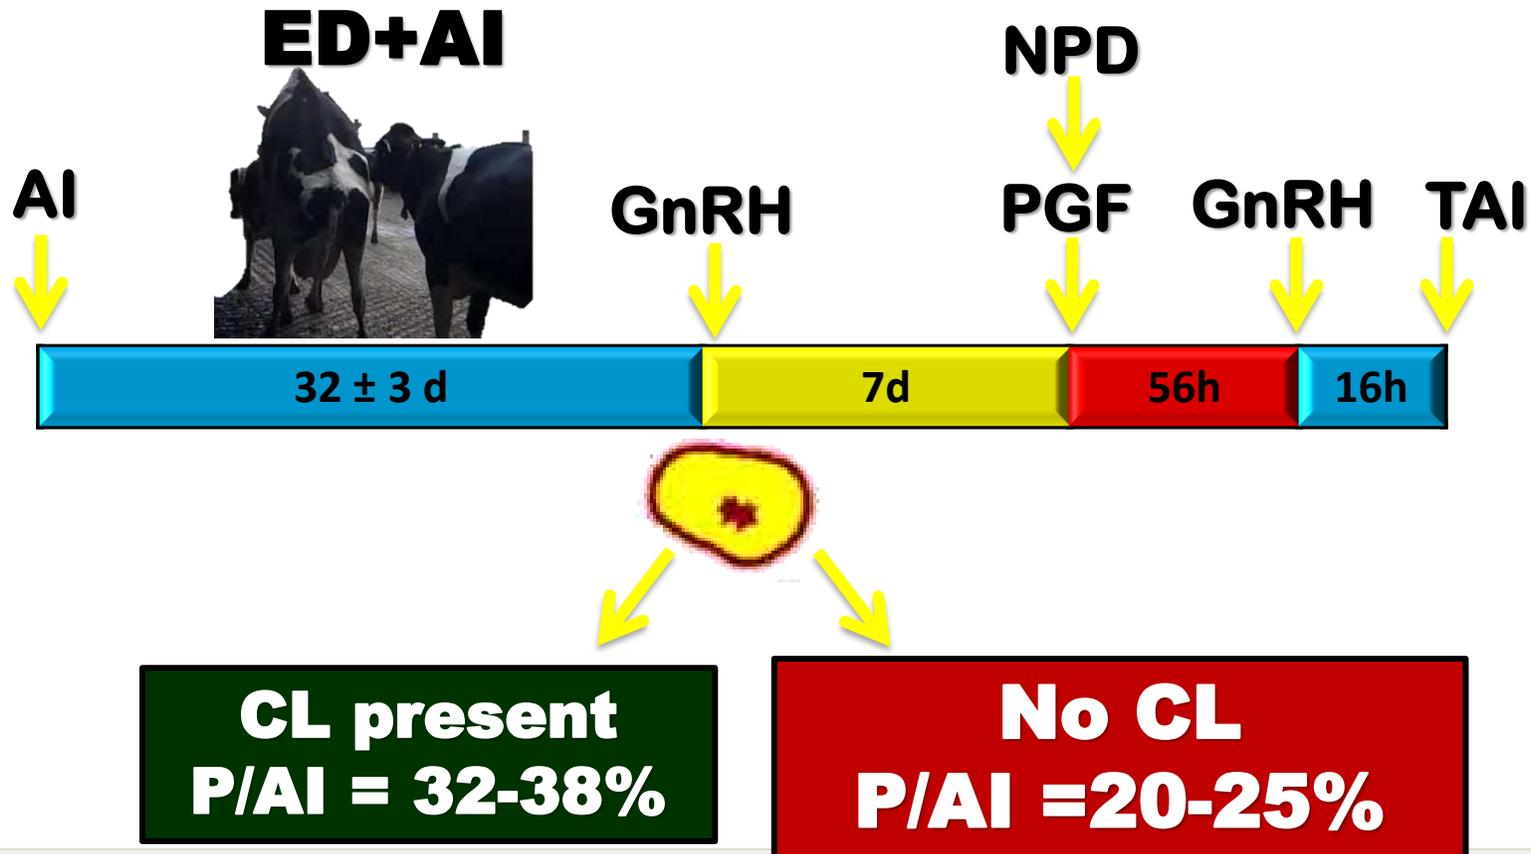

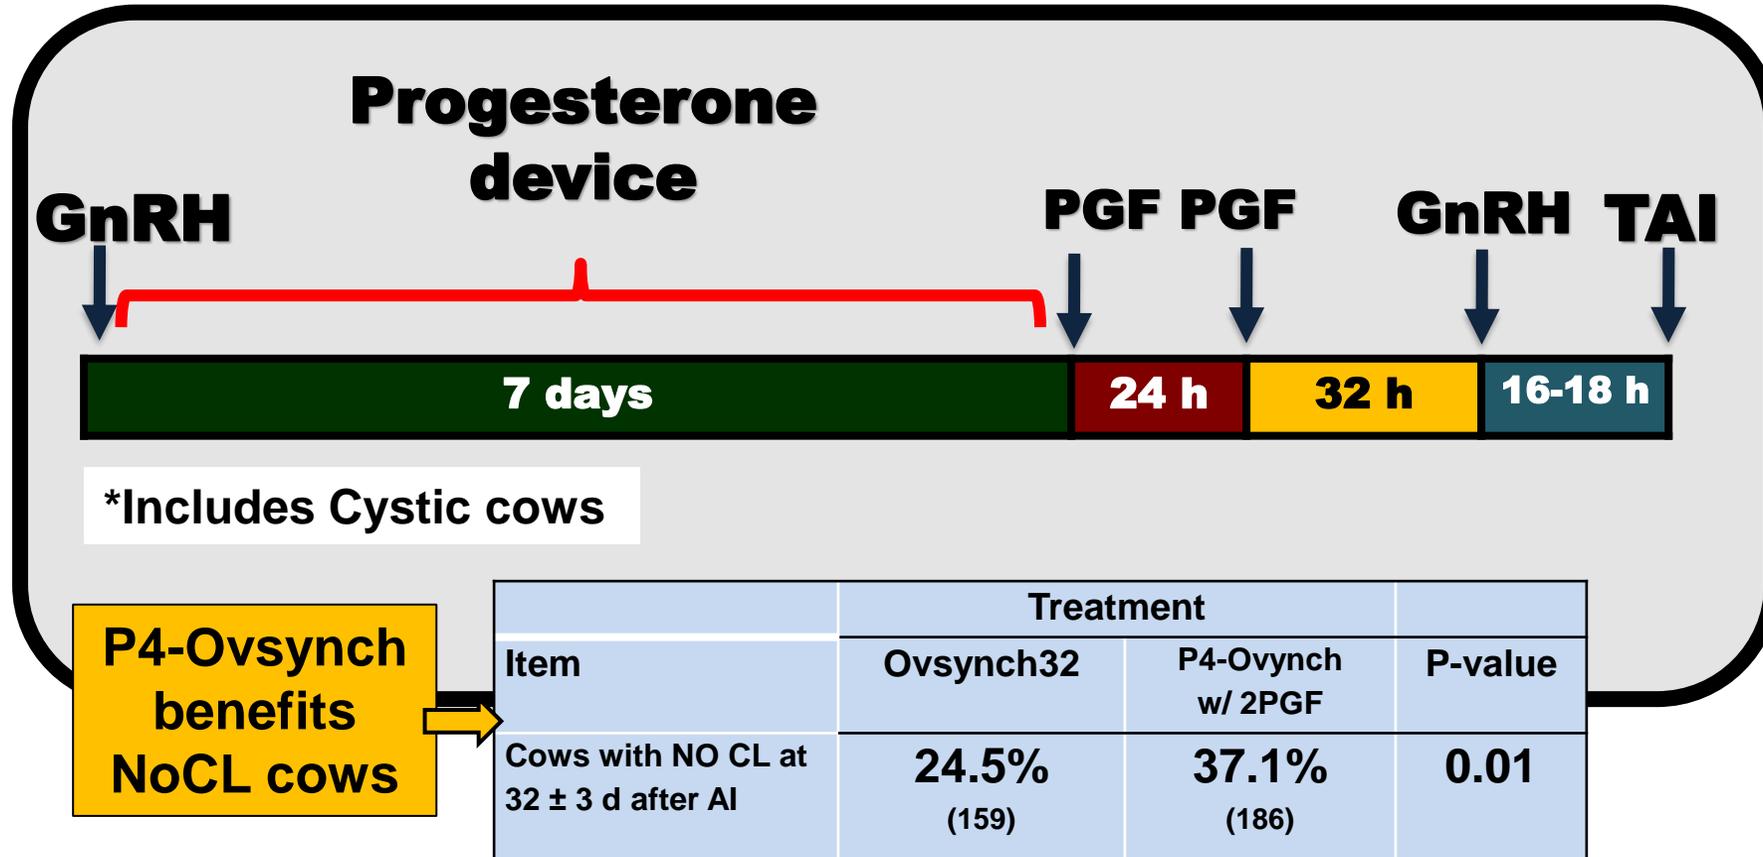

**~50%  
Reduction  
in fertility**

Study	Cows(%)	Pregnancies per AI, % (n/n)		P-value
		No CL	CL	
Giordano et al., 2012	34.8 (73/210)	9.6 (7/73)	35.8 (49/137)	<0.001
Giordano et al., 2013	22.4 (41/183)	17.1 (7/41)	30.3 (43/142)	0.08
Lopes Jr. et al., 2013	31.6 (61/193)	32.8 (20/61)	41.6 (55/132)	0.21

# Reassignment of Cows with NoCL at GnRH of Resynch

# P4-Ovsynch with 2 PGF Improves P/AI for No CL\* cows

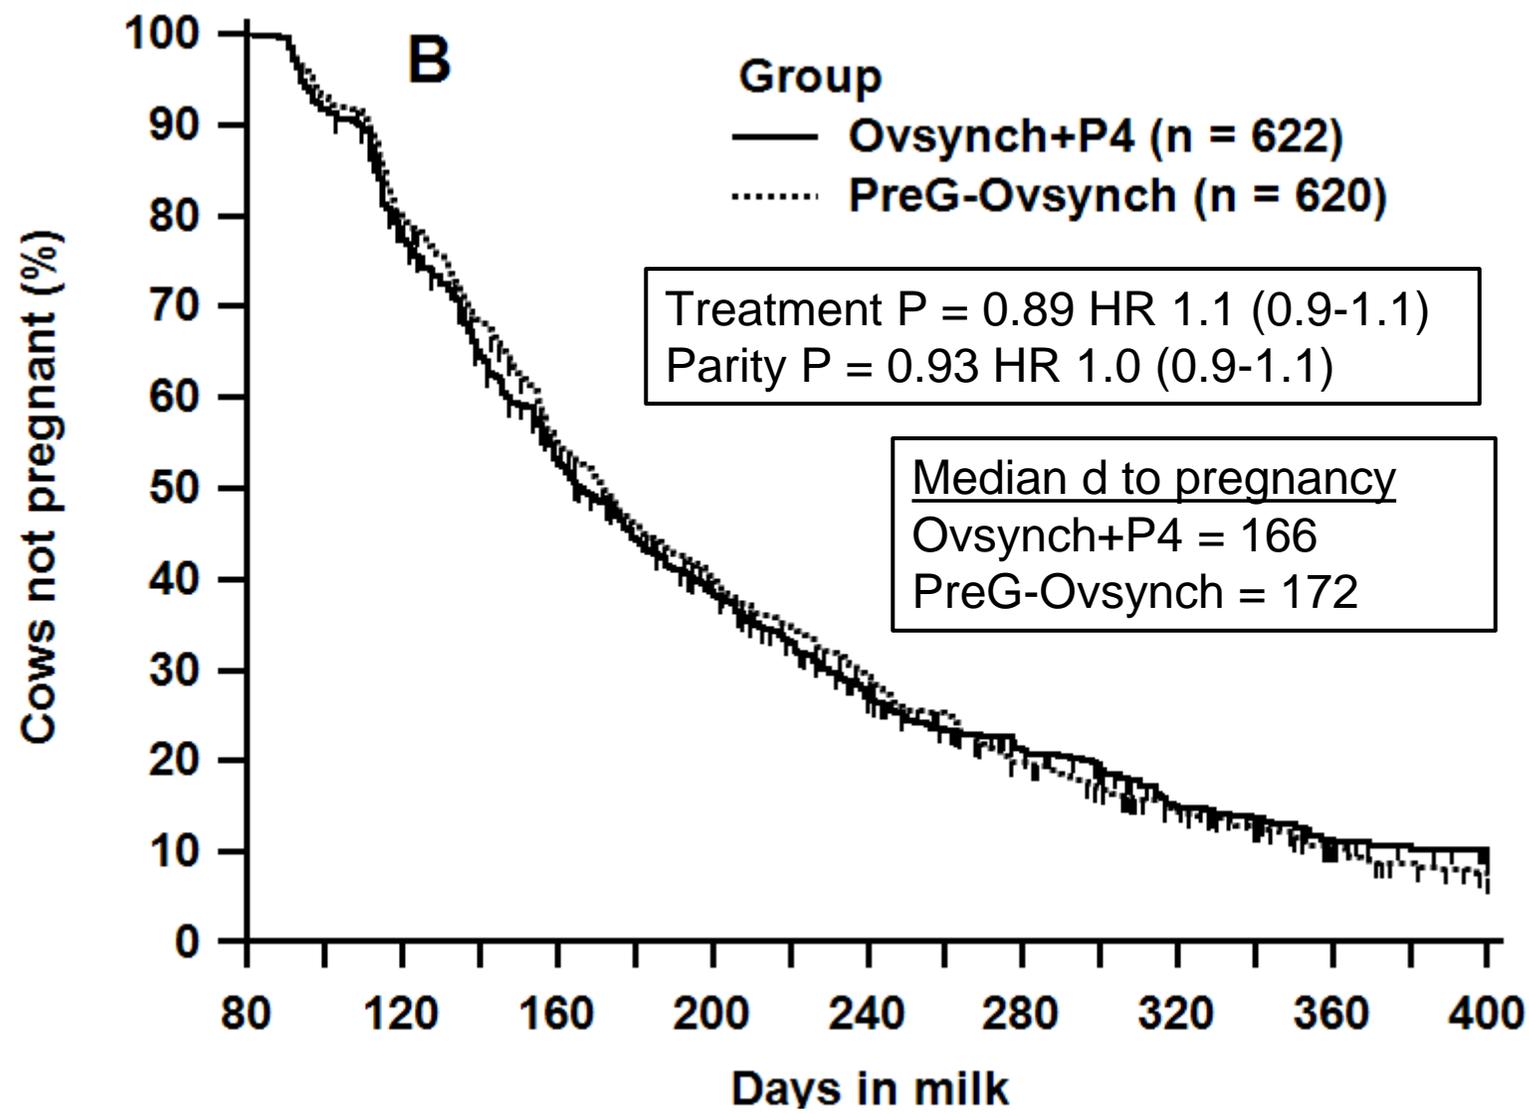

# Either exogenous or endogenous P4 for No CL cows works well

**Expected  
P/AI = ~35-40%**

# Time to Pregnancy Was the same for P4-Ovsynch vs PreG-Ovsynch when used at time of PGF of Resynch

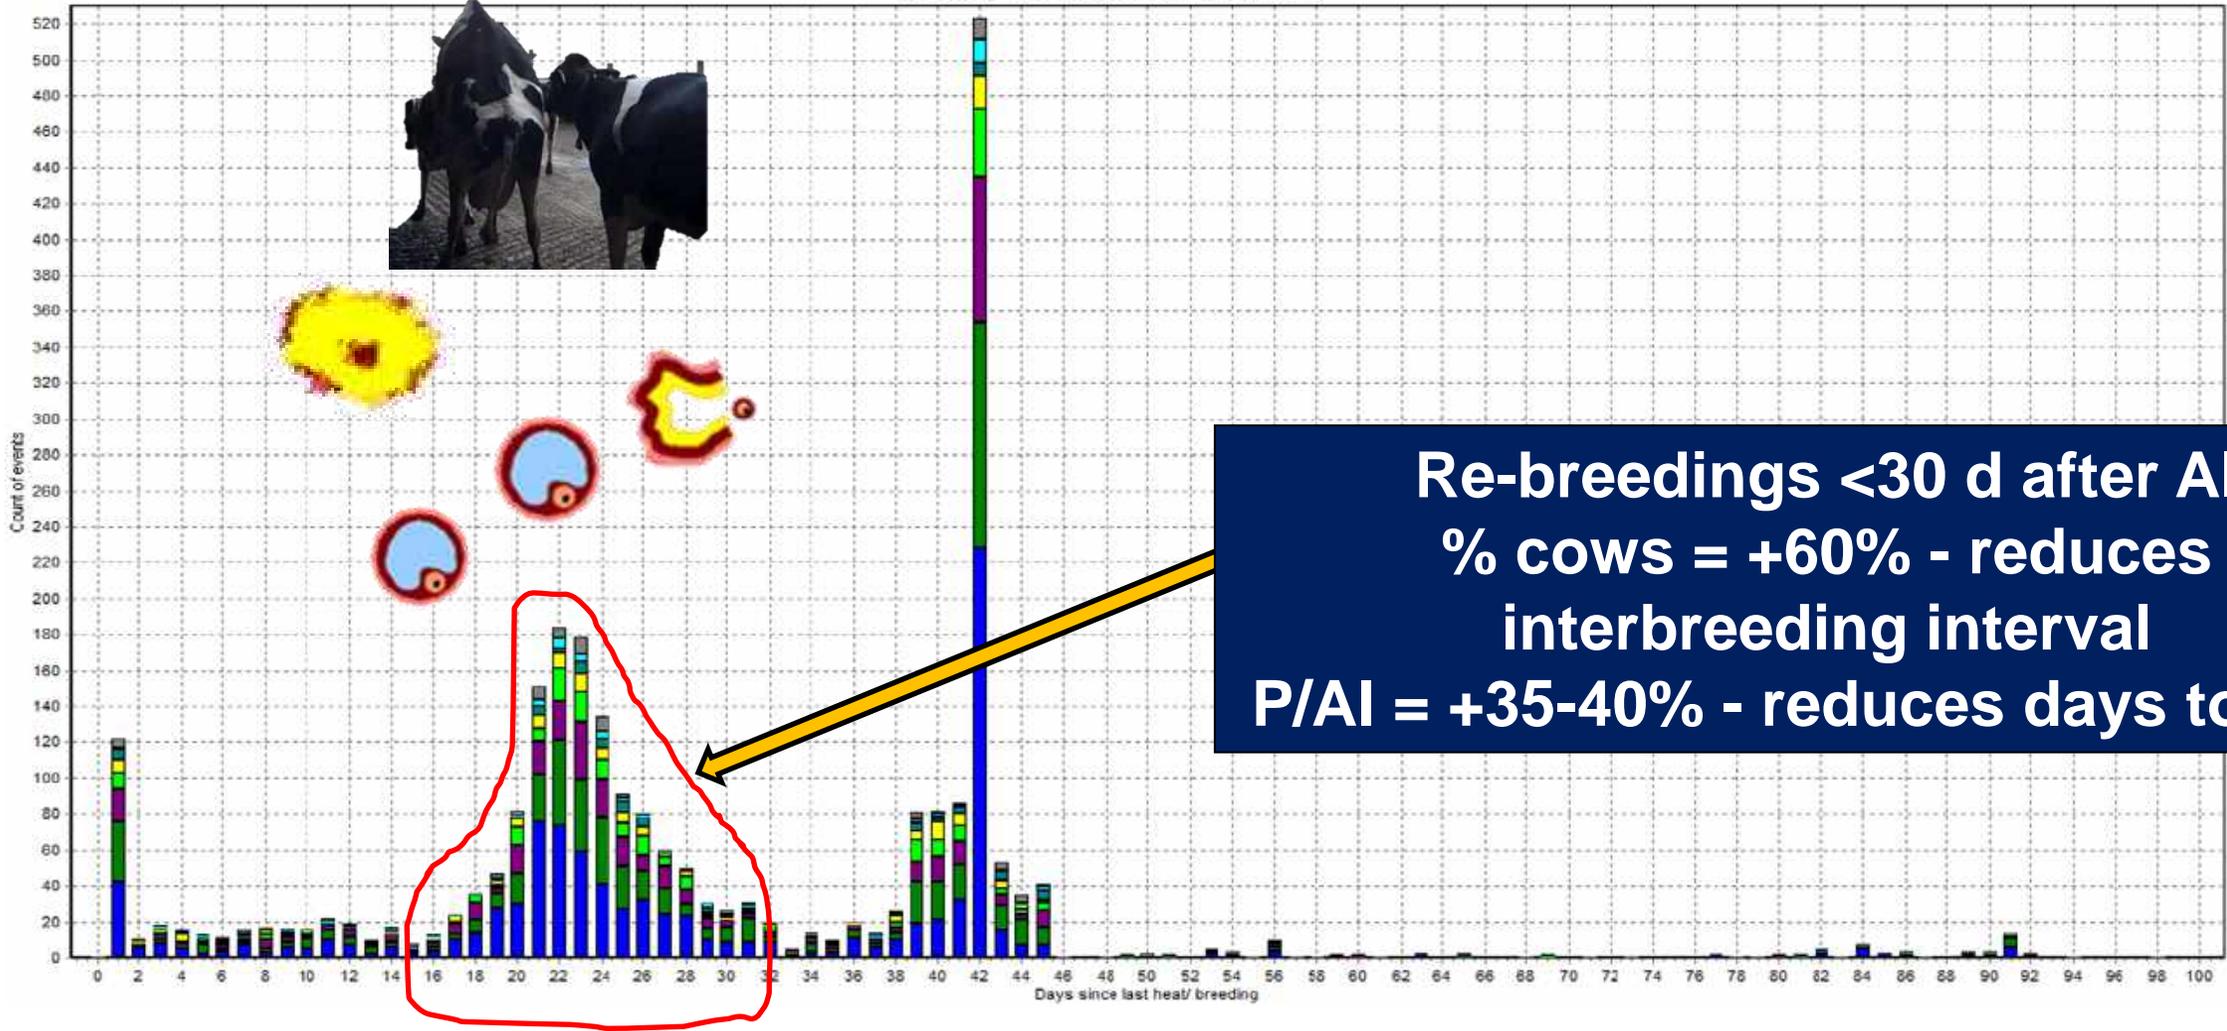

# Treatments for 2+ AI Based on Ovarian Status

- ✔ Improve P/AI of cows with no CL at GnRH or PGF of Resynch
- ✔ Reduce interbreeding interval without interfering with AI at detected estrus (AIE) + increase fertility
- ✔ Maximize insemination of cows at detected estrus through induction of estrus after non pregnancy diagnosis (NPD)

# AI is fastest, cheapest, and easiest way to re-breed non-pregnant cows

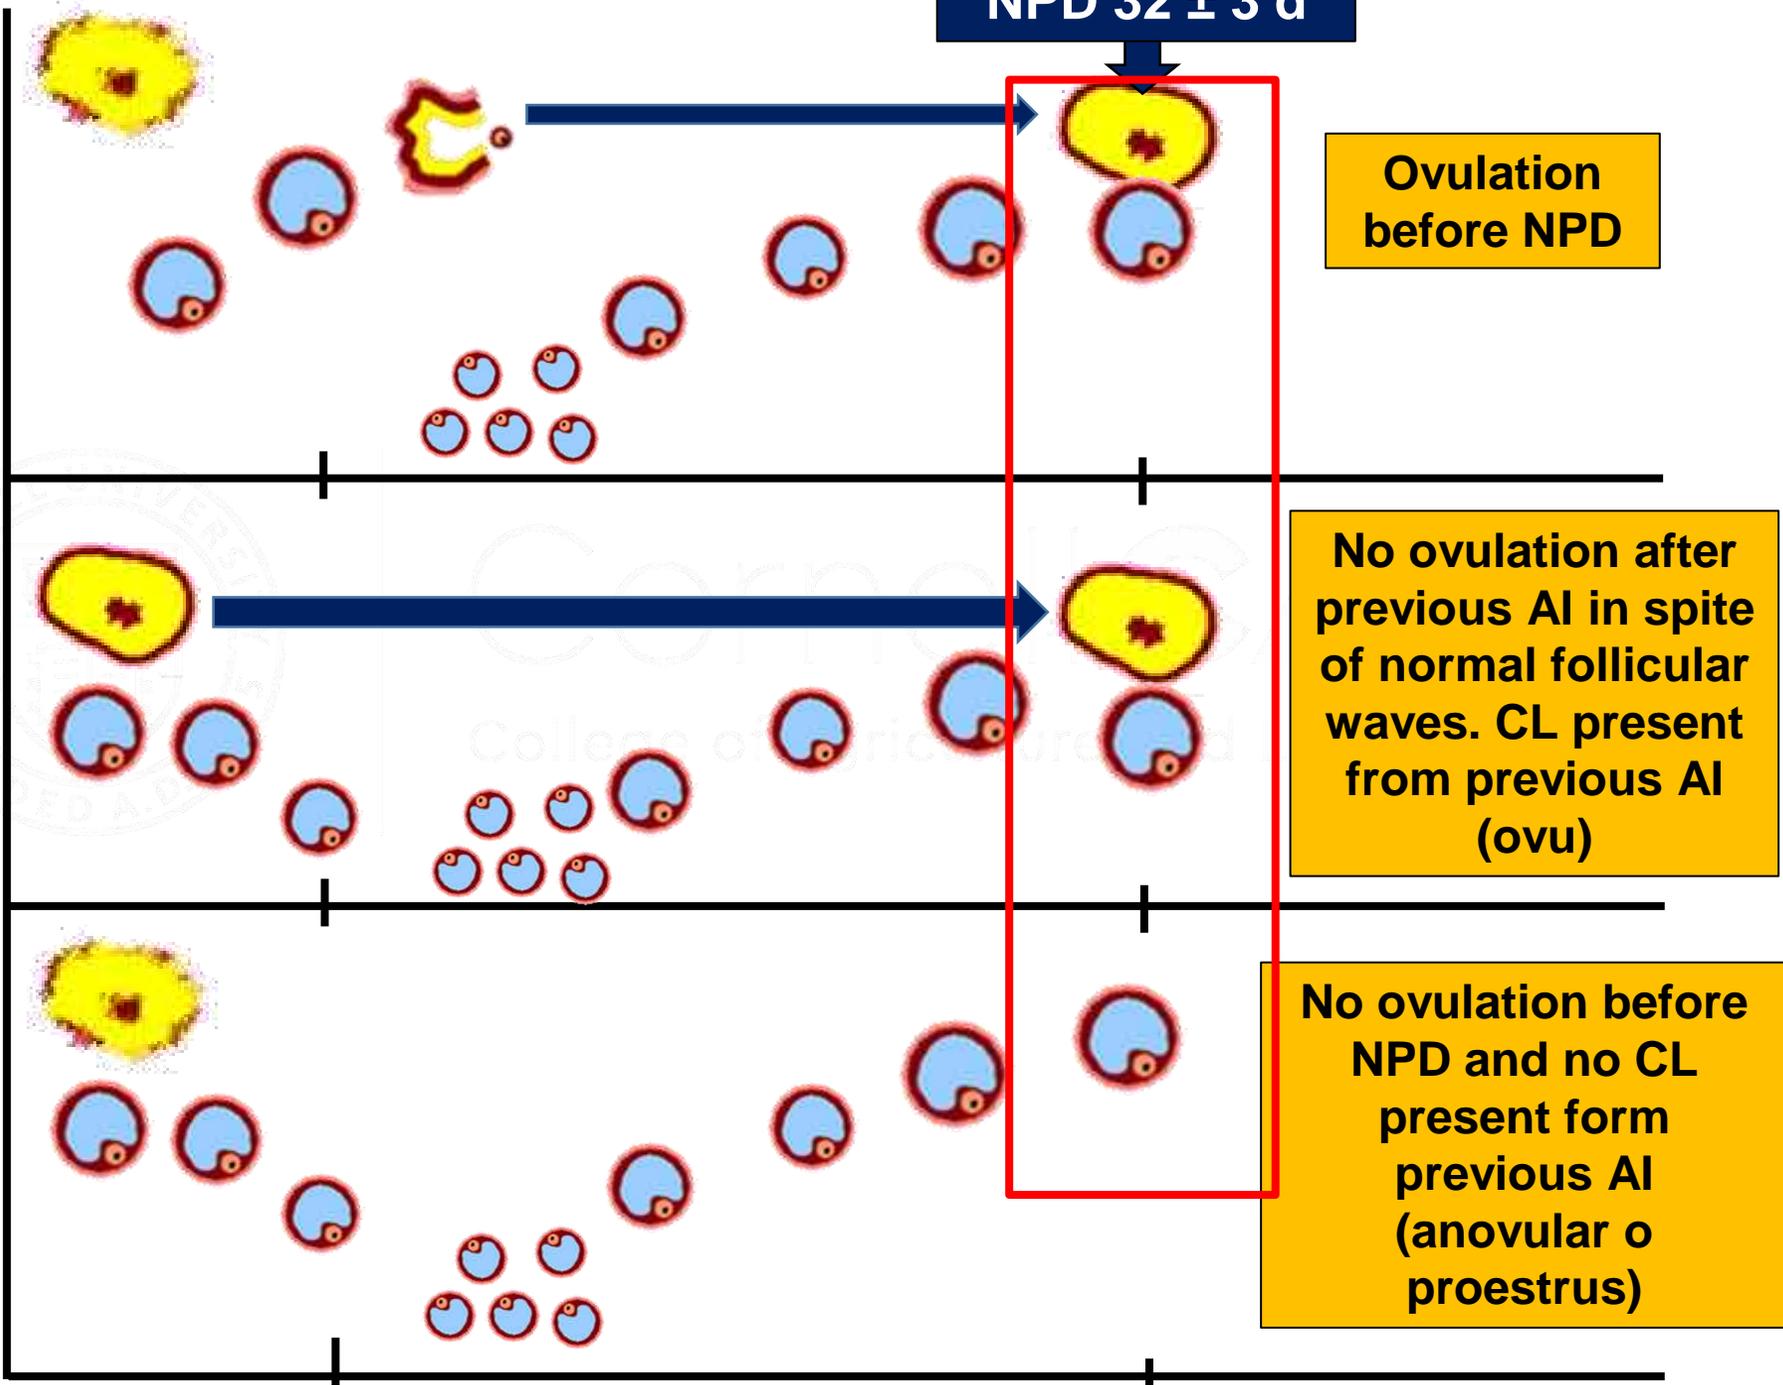

[BRED] EGRAPH EC-5 FOR LACT>0|HW1N23456789T100

Re-breeding <30 d after AI  
% cows = +60% - reduces  
interbreeding interval  
P/AI = +35-40% - reduces days to preg

**Previous AI**

**NPD  $32 \pm 3$  d**

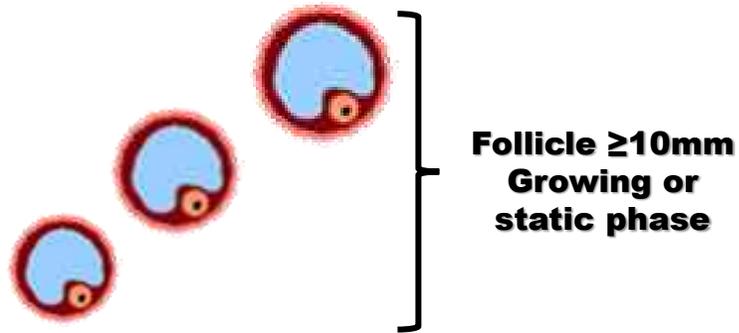

Ovulation before NPD

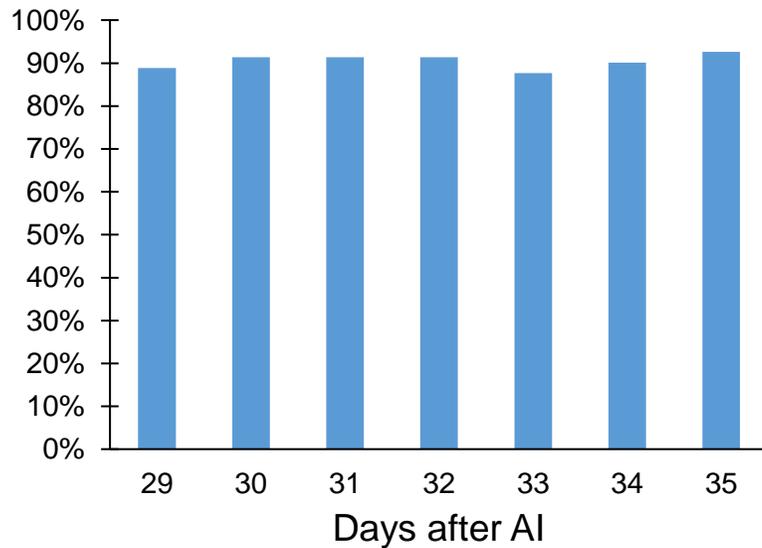

No ovulation after previous AI in spite of normal follicular waves. CL present from previous AI (ovu)

No ovulation before NPD and no CL present from previous AI (anovular o proestrus)

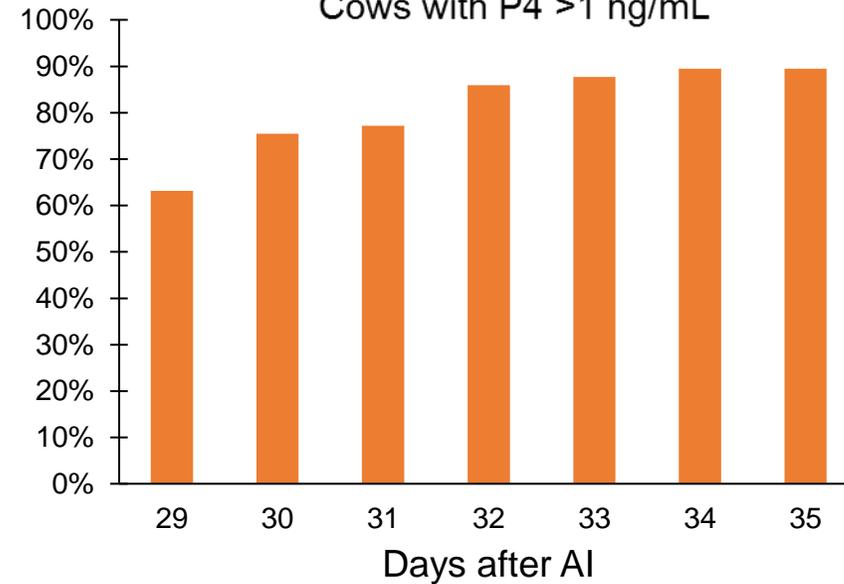

# What do cows have on their ovaries 29 to 35 d after AI?

Cows with an active follicle

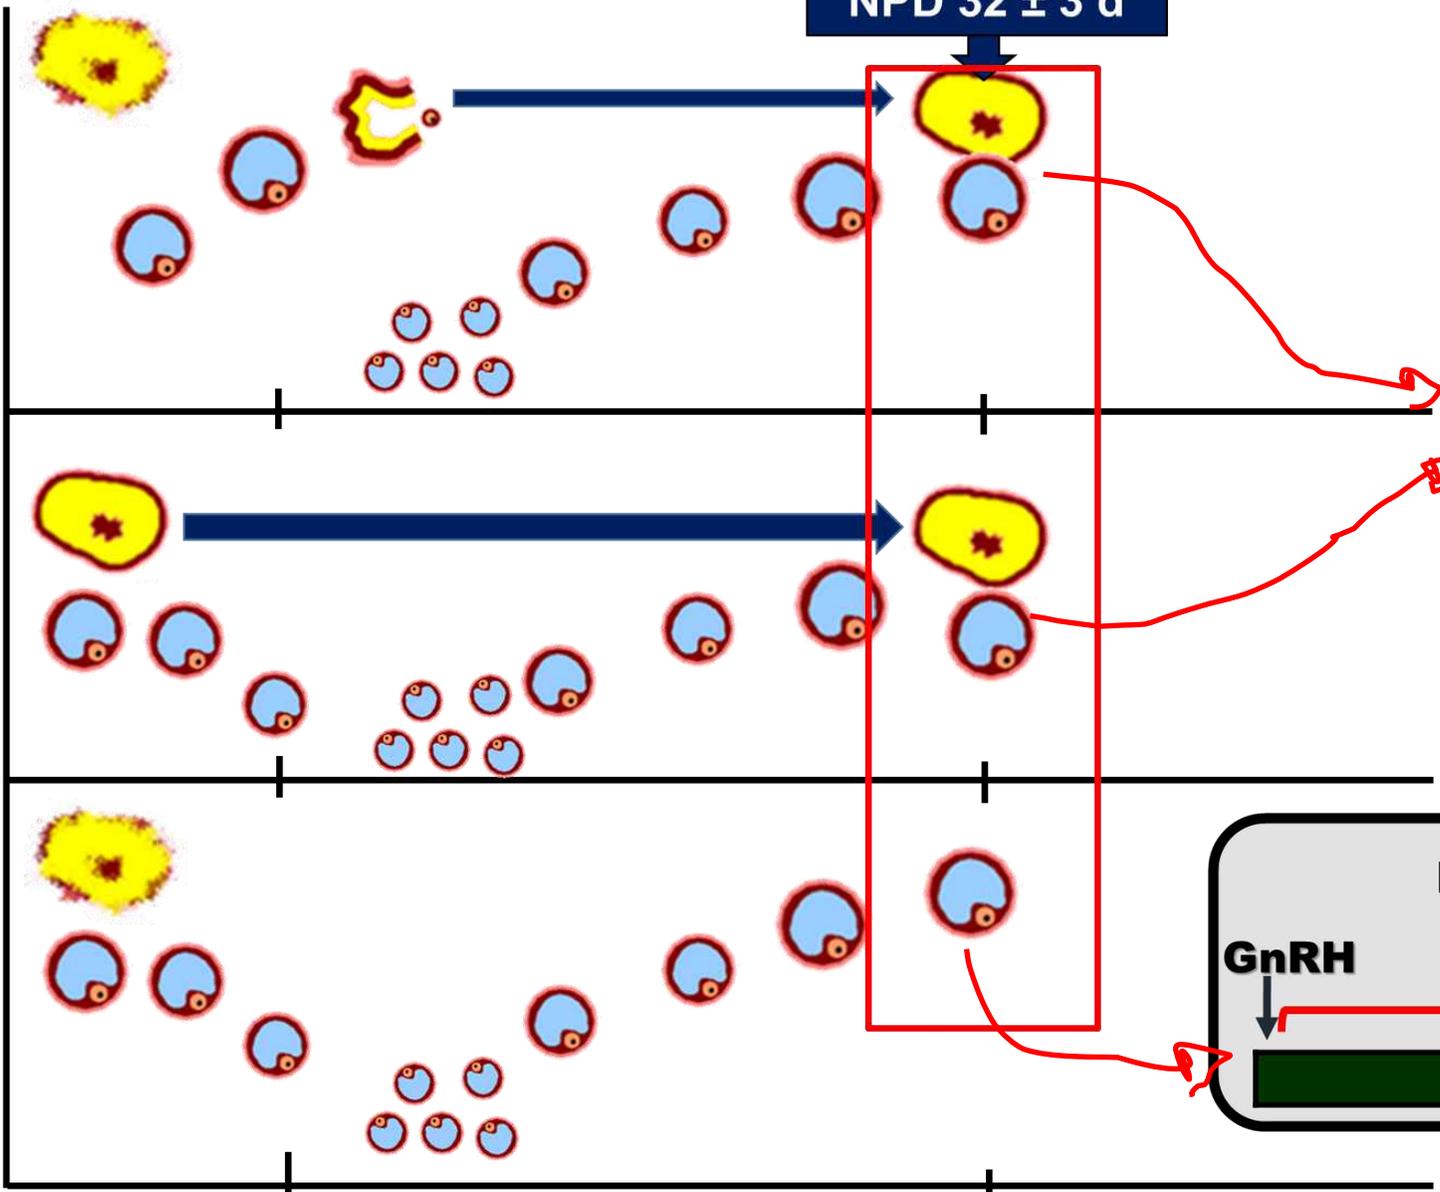

Cows with P4 >1 ng/mL

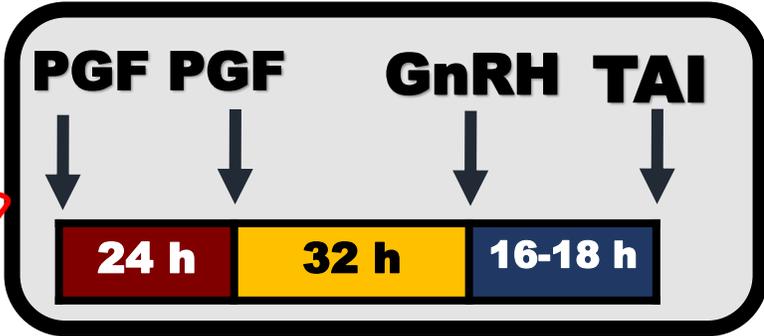

Previous AI

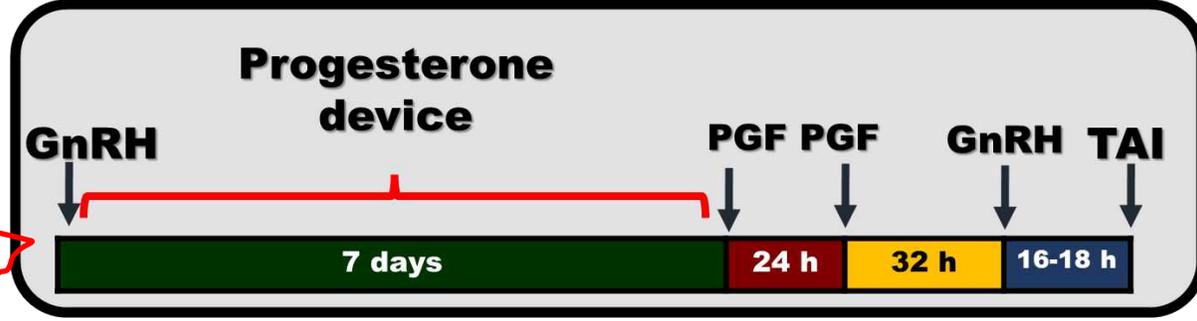

NPD 32 ± 3 d

### Short-Resynch

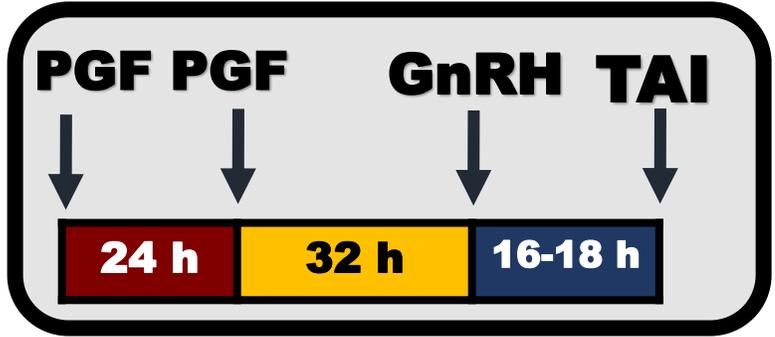

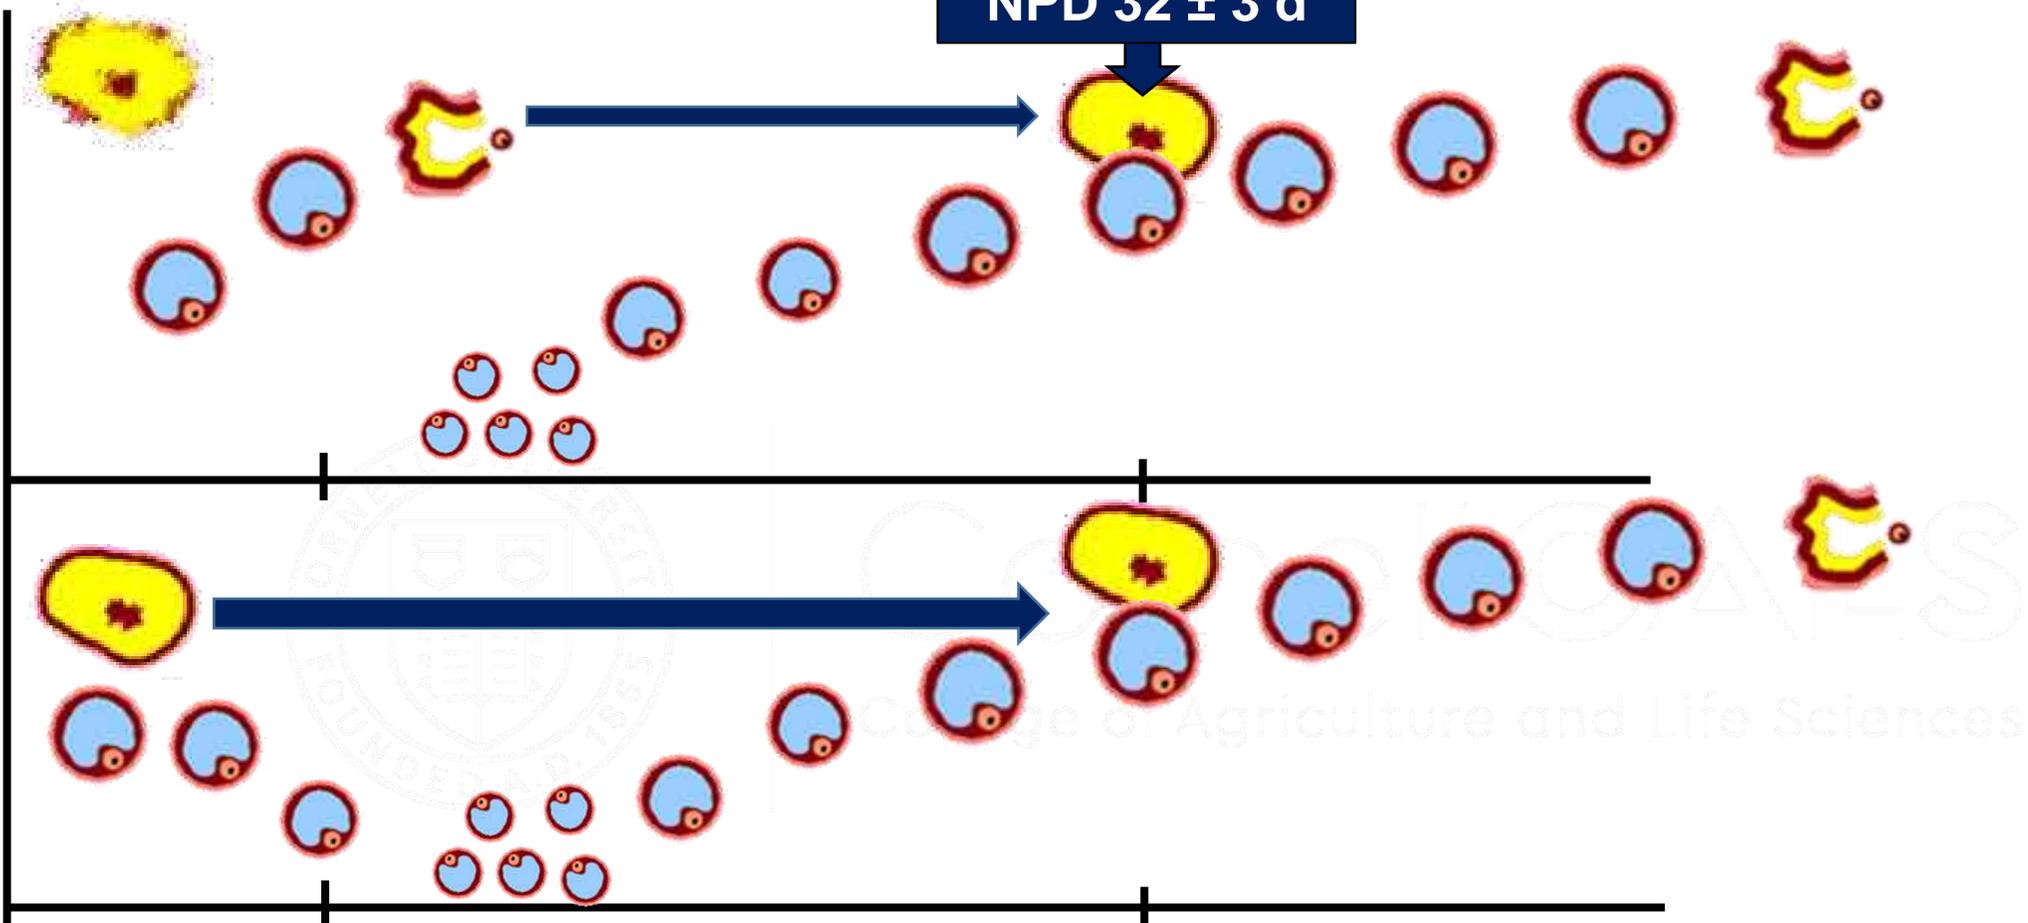

### P4-Ovsynch

Previous AI

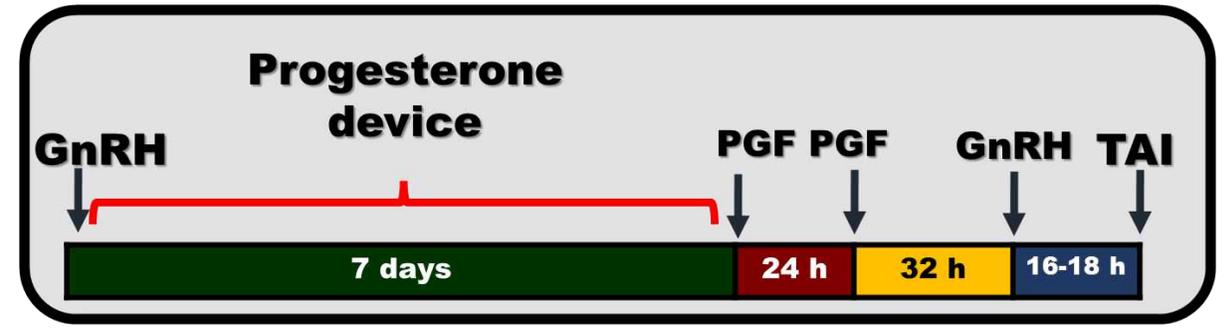

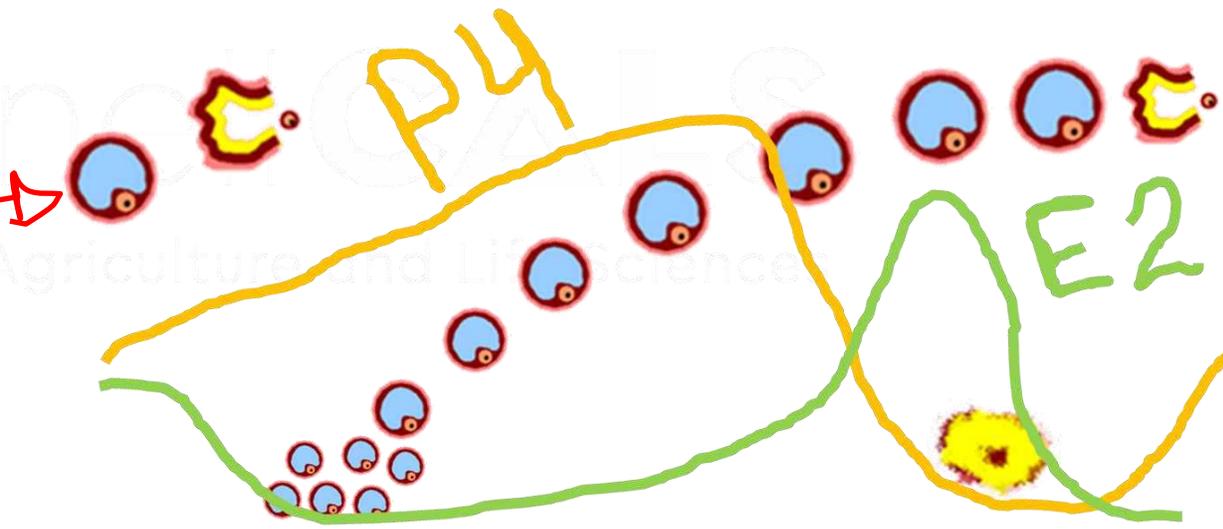

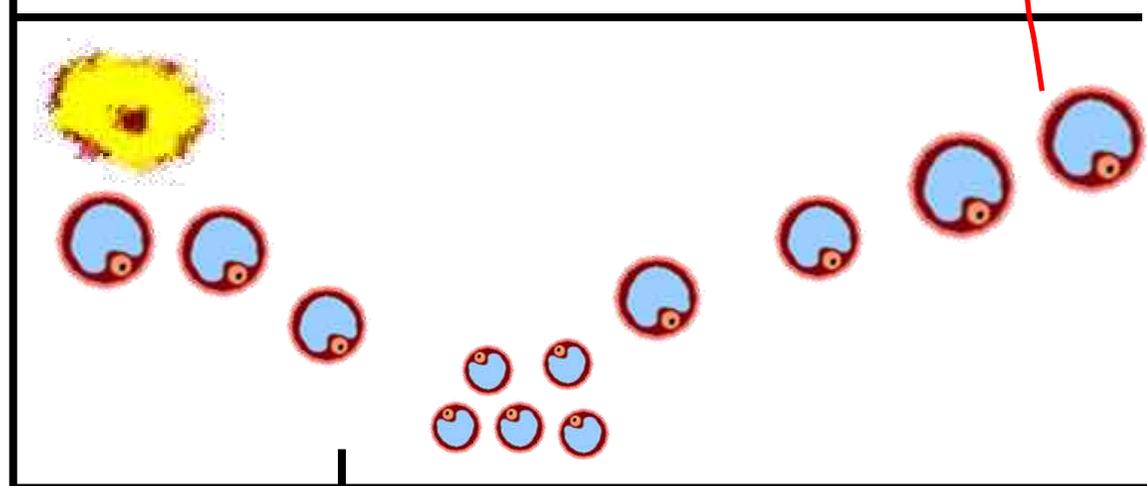

NPD  $32 \pm 3$  d

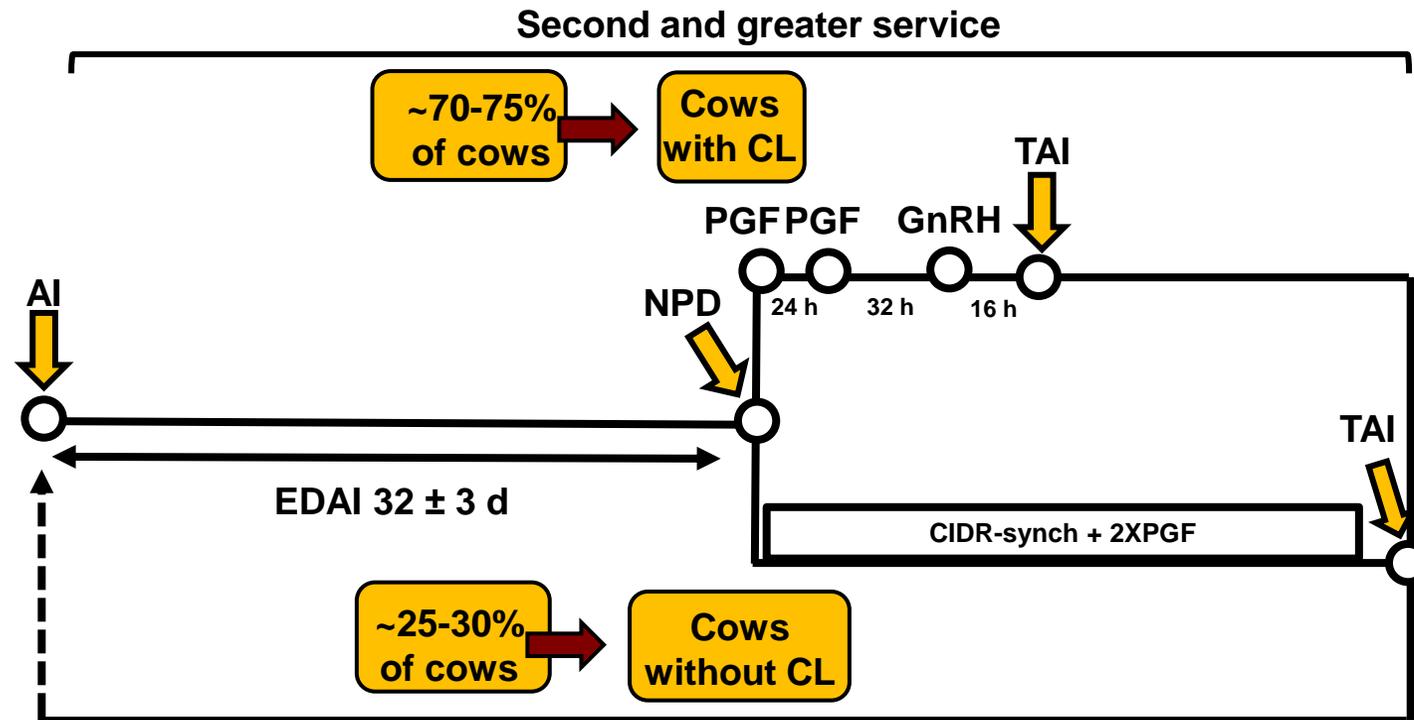

# Previous AI

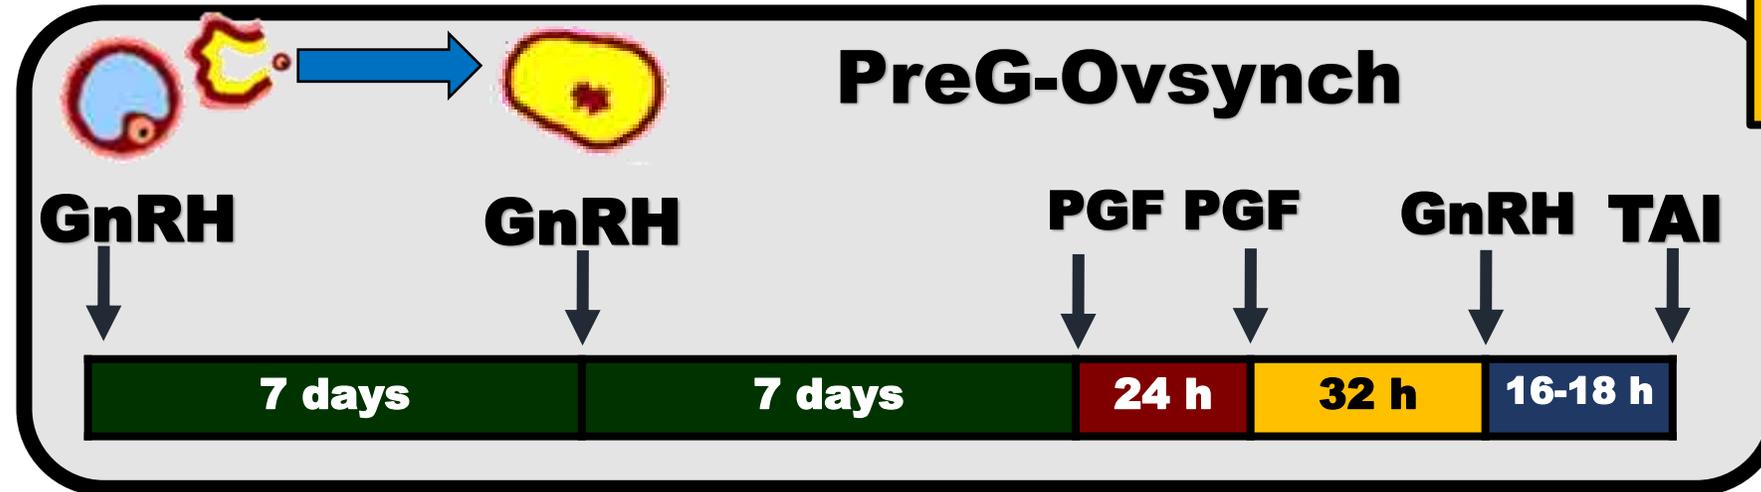

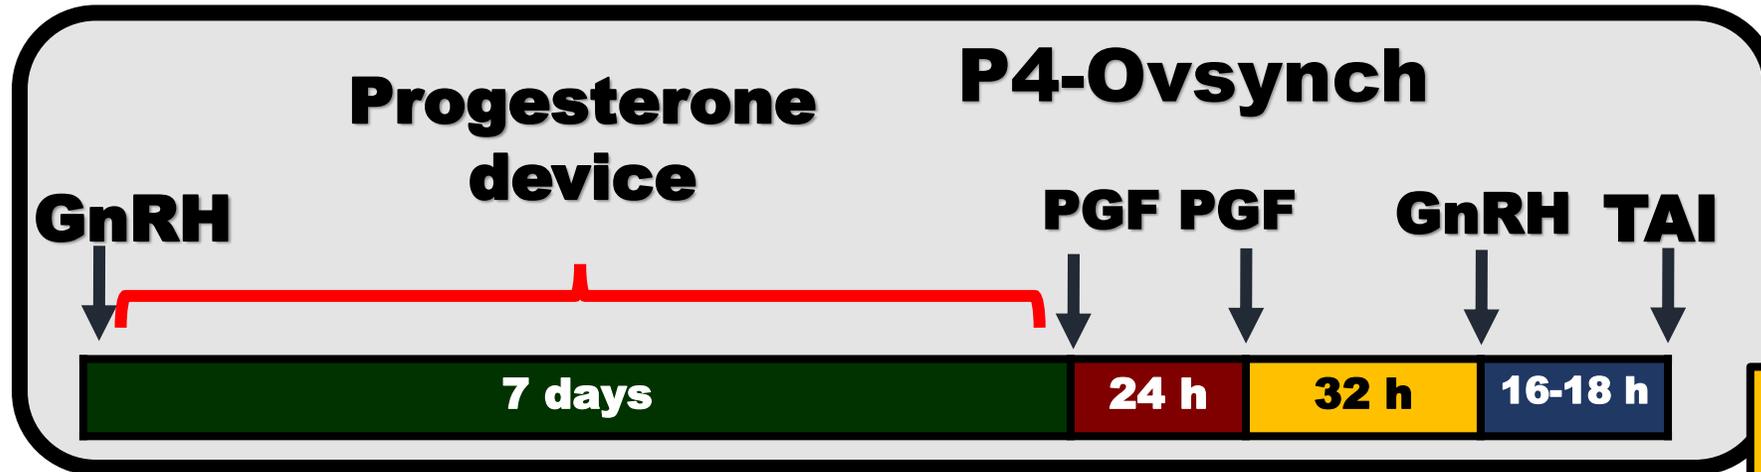

College of Agriculture and Life Sciences

# Short Resynch + P4-Ovsynch is an Effective Program for 2+ AI Service

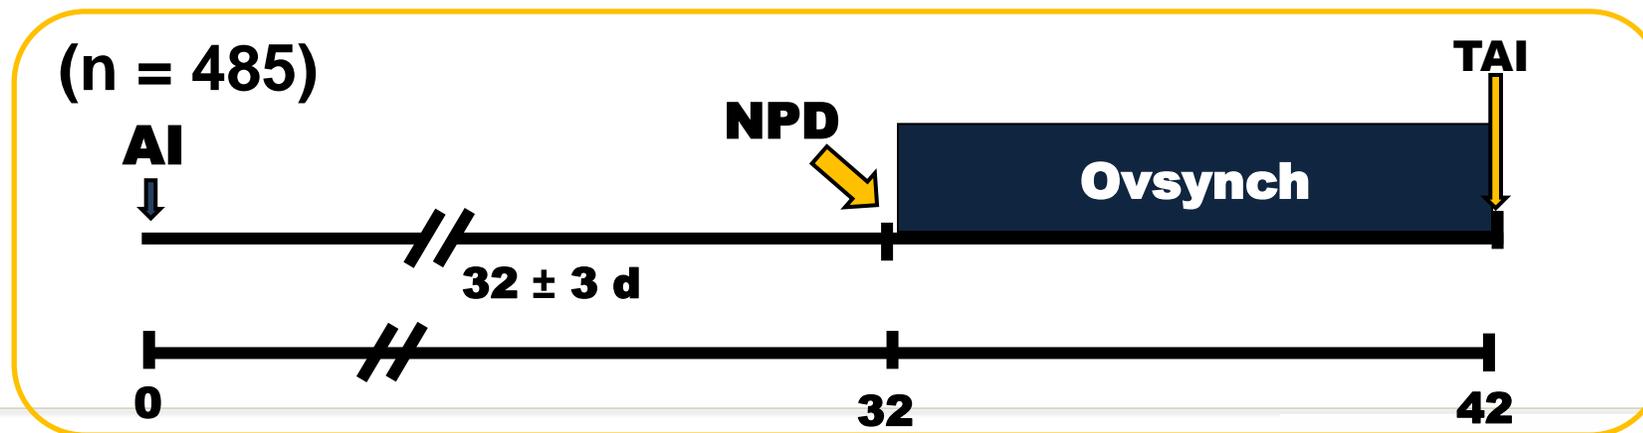

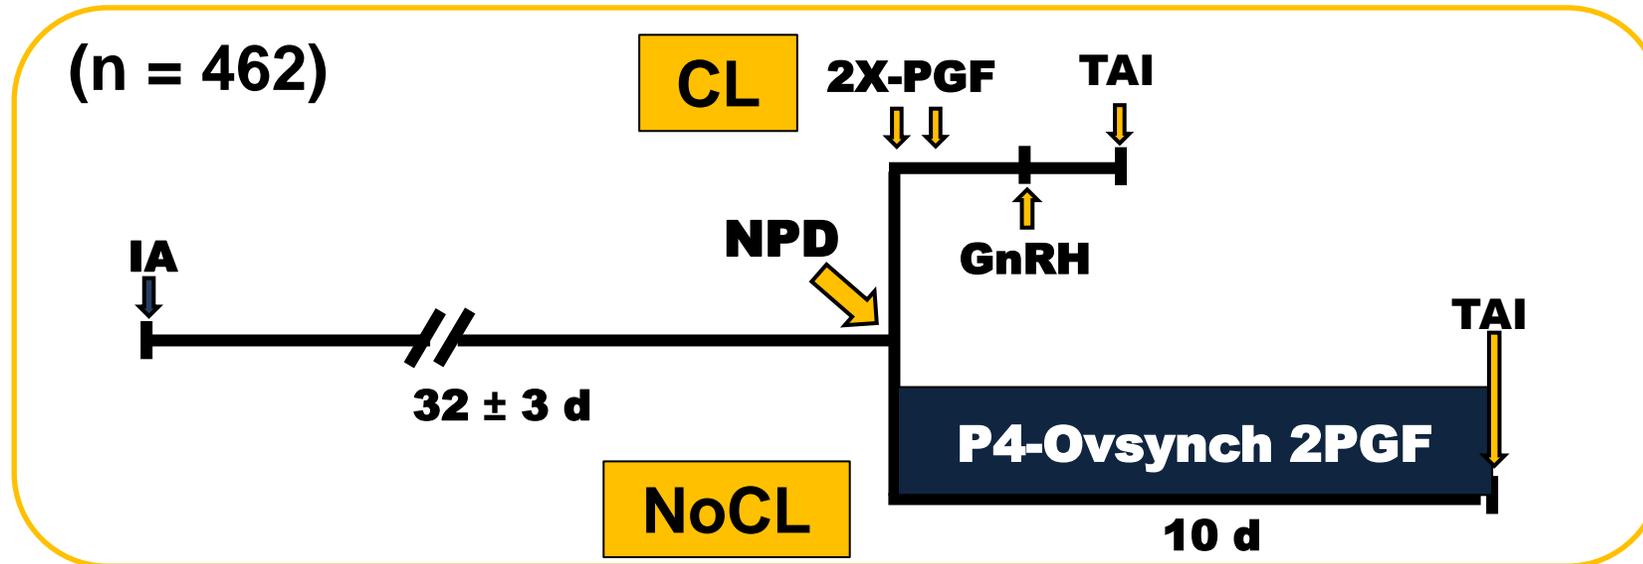

# Either exogenous or endogenous P4 for No CL cows works well

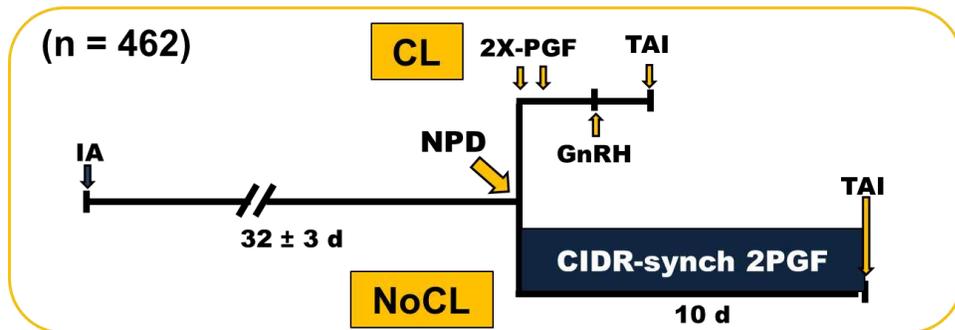

**Expected  
P/AI = ~35-40%**

# Short Resynch + P4-Ovsynch was Compared to D32-Resynch

# Pregnancies per AI - Short Resynch + P4-Ovsynch vs D32-Resynch

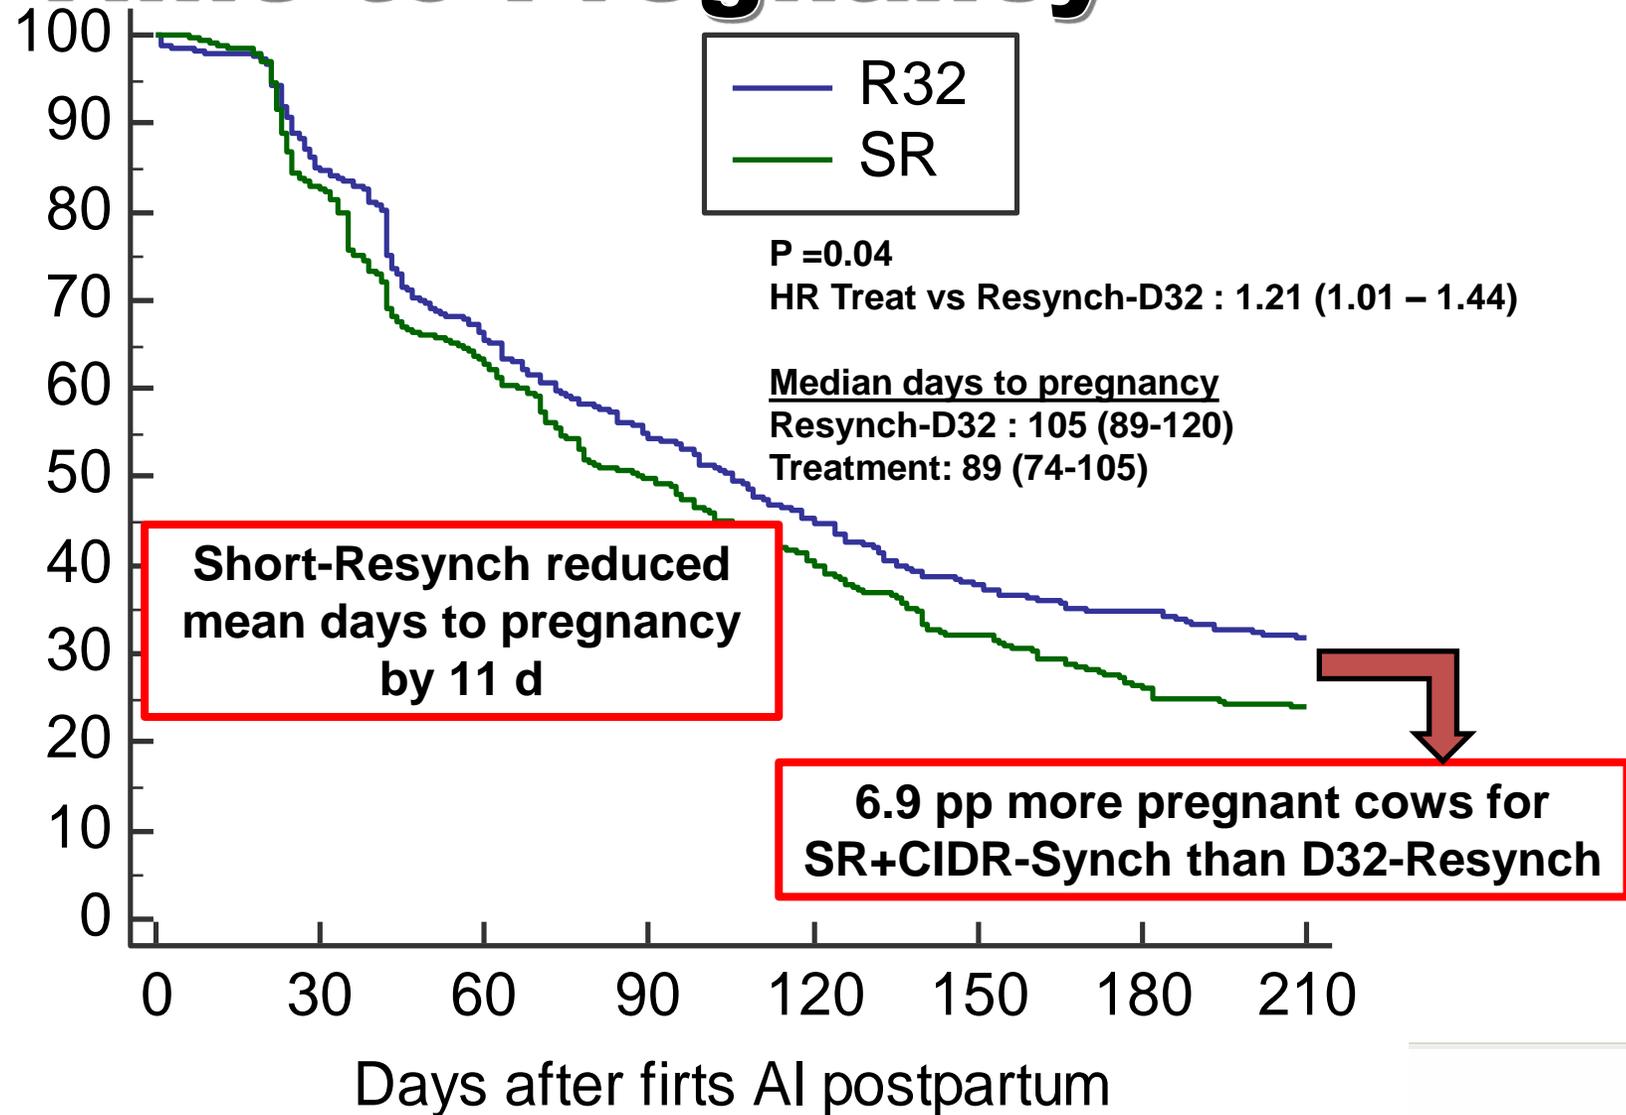

Item	Treatment		P-value
	Control (Ovsynch32)	Treatment (Short Resynch)	
Cows with a CL at PregCheck	<b>32.0%</b> (391)	<b>31.8%</b> (481)	<b>0.97</b>
Cows with NO CL at PregCheck	<b>24.5%</b> (159)	<b>37.1%</b> (186)	<b>0.01</b>
<b>Overall</b>	<b>29.8%</b> (561)	<b>33.3%</b> (667)	<b>0.18</b>

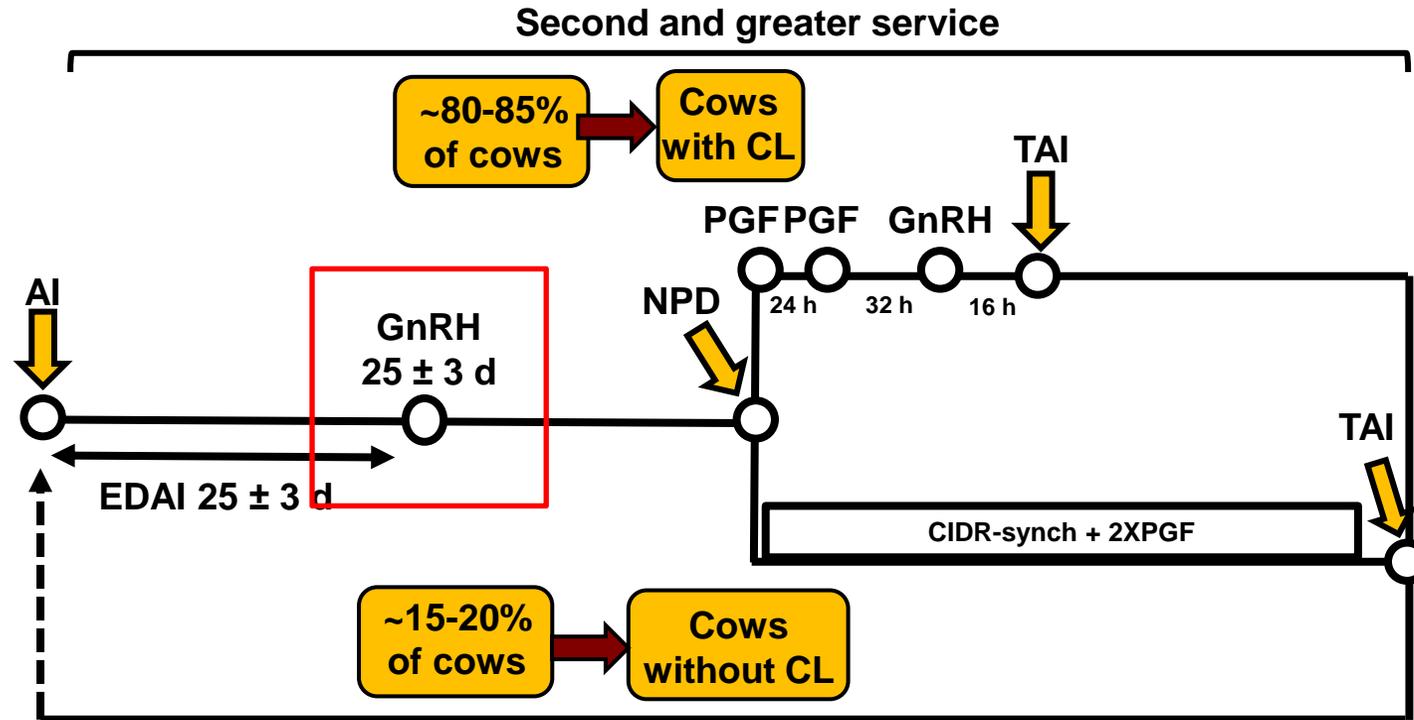

## Summary

- **CL cows in Short-Resynch have similar fertility than CL cows in Ovsynch resynch**
- **NoCL cows treated with P4-Ovsynch have increased fertility**

# Short Resynch + P4-Ovsynch Reduced Time to Pregnancy

# D25-Resynch + P4-Ovsynch is an Effective Program for 2+ AI Service

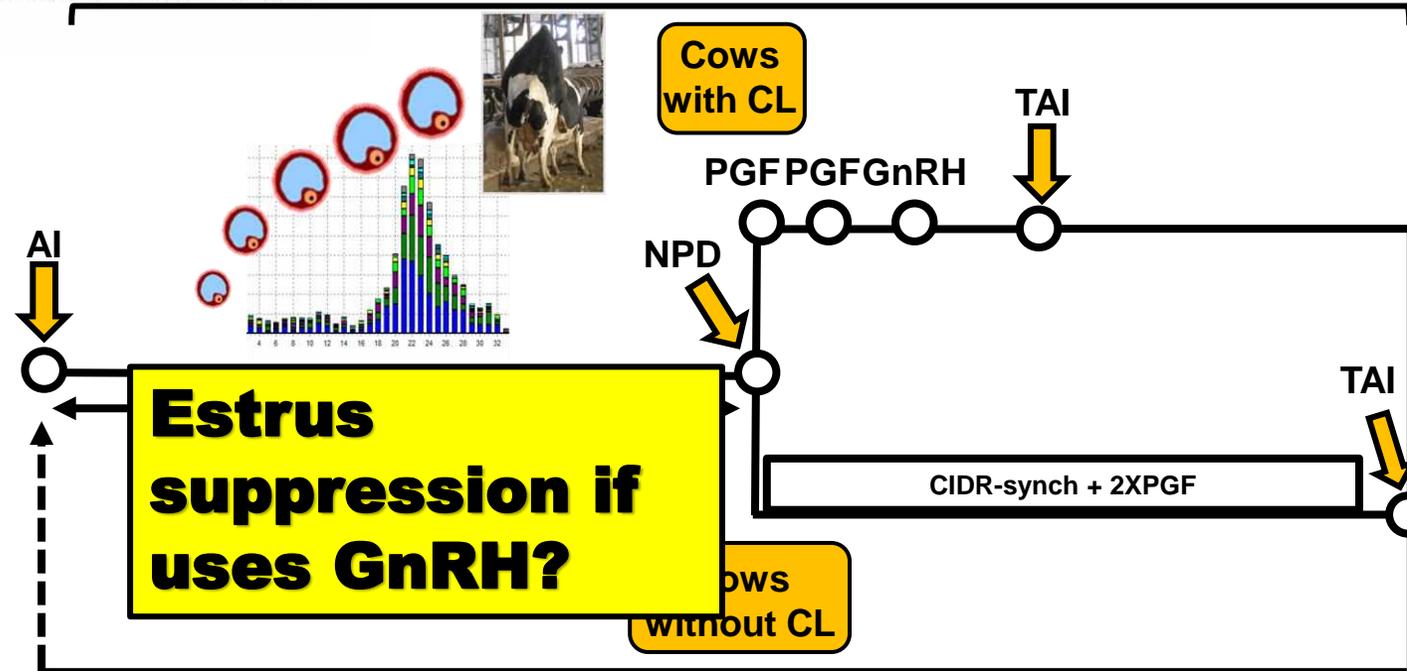

## Lactating dairy cows managed for second and greater artificial insemination services with the Short-Resynch or Day 25 Resynch program had similar reproductive performance

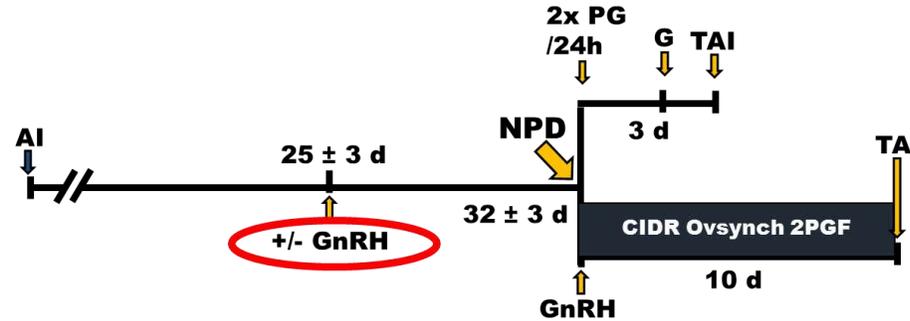

M. M. Pérez,\* R. Wijma,\* M. Scarbolo, E. Cabrera, F. Sosa, E. M. Sitko, and J. O. Giordano†  
 Department of Animal Science, Cornell University, Ithaca, NY 14853

### Second and greater service

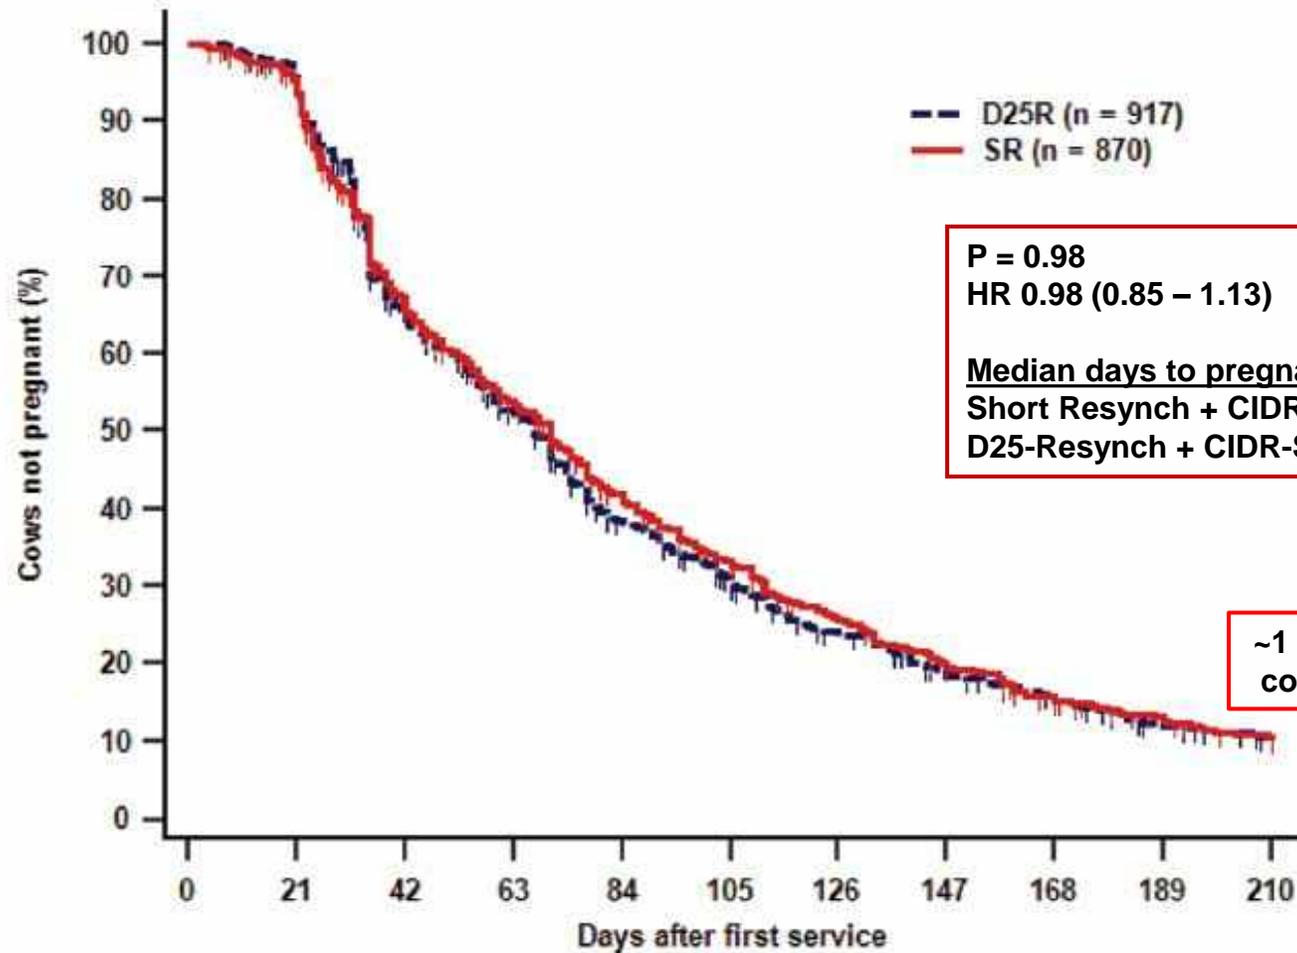

Item	Treatment		P-value
	D25 Resynch + CIDR-Synch	ShortResynch + CIDR-Synch	
Cows AI at detected estrus (%)	50 (1,191/2,390)	60 (1,489/2,467)	+10% more cows EDAI before NPD

# Short Resynch + P4-Ovsynch vs. D25-Resynch + P4-Ovsynch

Item	Treatment		P-value
	D25-Resynch+ P4-Ovsynch	ShortResynch + P4-Ovsynch	
Cows with CL (%)	<b>84</b> (990/1,178)	<b>76</b> (737/969)	<b>0.01</b>
<b>P/AI CL at NPD (%)</b> (D25-Resynch or Short Resynch)	<b>41</b> (410/990)	<b>33</b> (243/737)	<b>0.01</b>
P/AI NO CL at NPD (%) (CIDR-Synch)	<b>39</b> (73/188)	<b>44</b> (102/232)	<b>0.36</b>
Overall cows pregnant through TAI	<b>43</b> (483/1,178)	<b>37</b> (345/969)	<b>0.01</b>

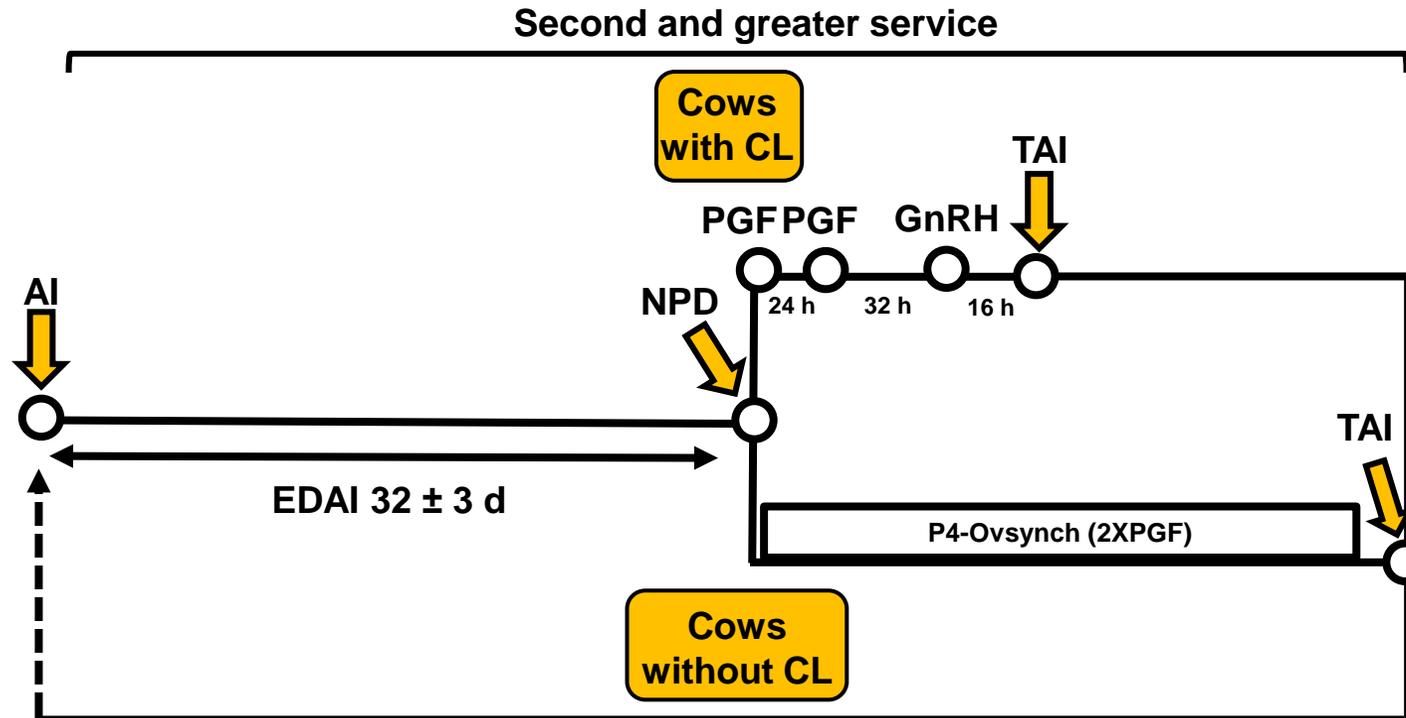

# Short Resynch + P4-Ovsynch vs. D25-Resynch + P4-Ovsynch Led to Similar Pregnancy Dynamics

**No difference in time to pregnancy and proportion of cows pregnant at the end of lactation**

# Short Resynch + P4-Ovsynch

Preferred for farms that are successful with estrus breedings!!!

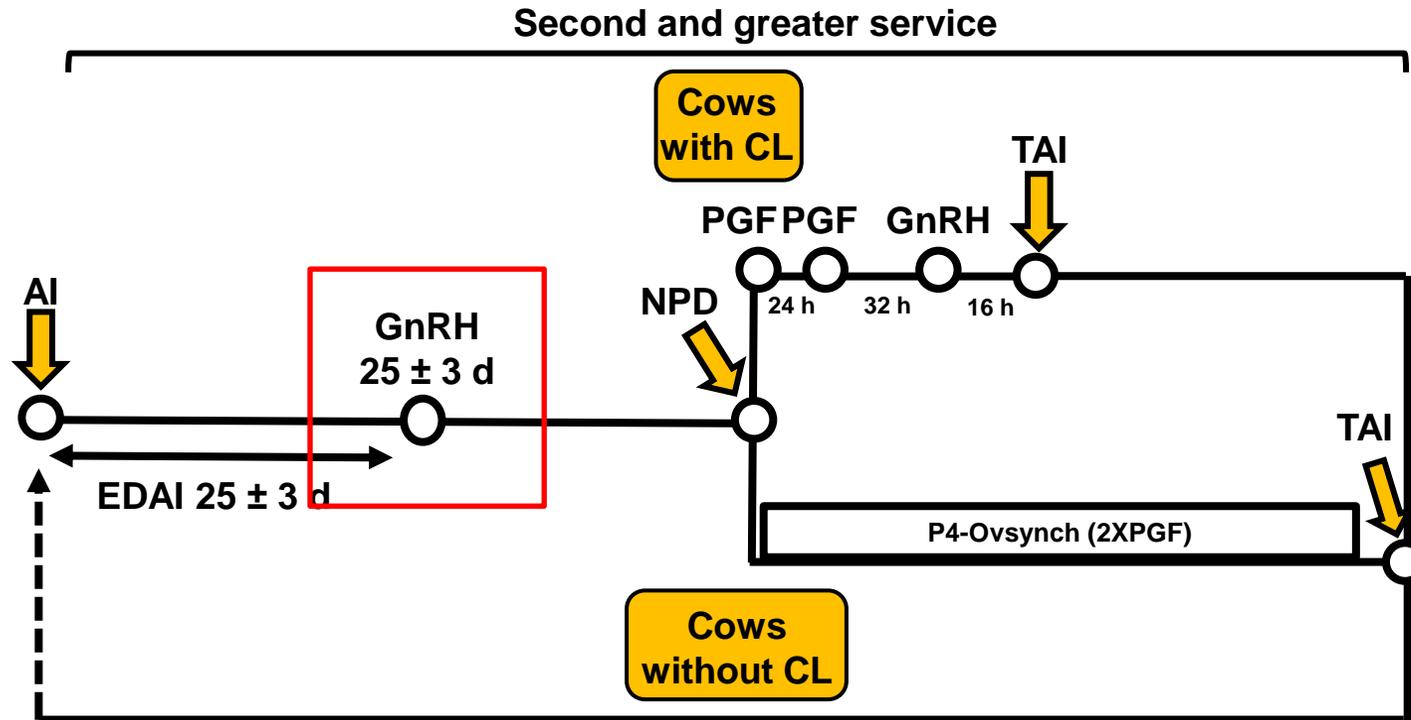

## Expected benefits:

- allows normal estrus expression and fewer GnRH treatments
- reduces interbreeding interval for TAI services in cows with CL at NPD
- increases TAI fertility for cows without a CL at NPD

# D25 Resynch + P4-Ovsynch

Preferred for farms that are NOT successful with estrus breedings!!!

## Expected benefits:

- reduces interbreeding interval for TAI services in cows with CL at NPD and maximizes P/AI
- increases TAI fertility for cows without a CL at NPD

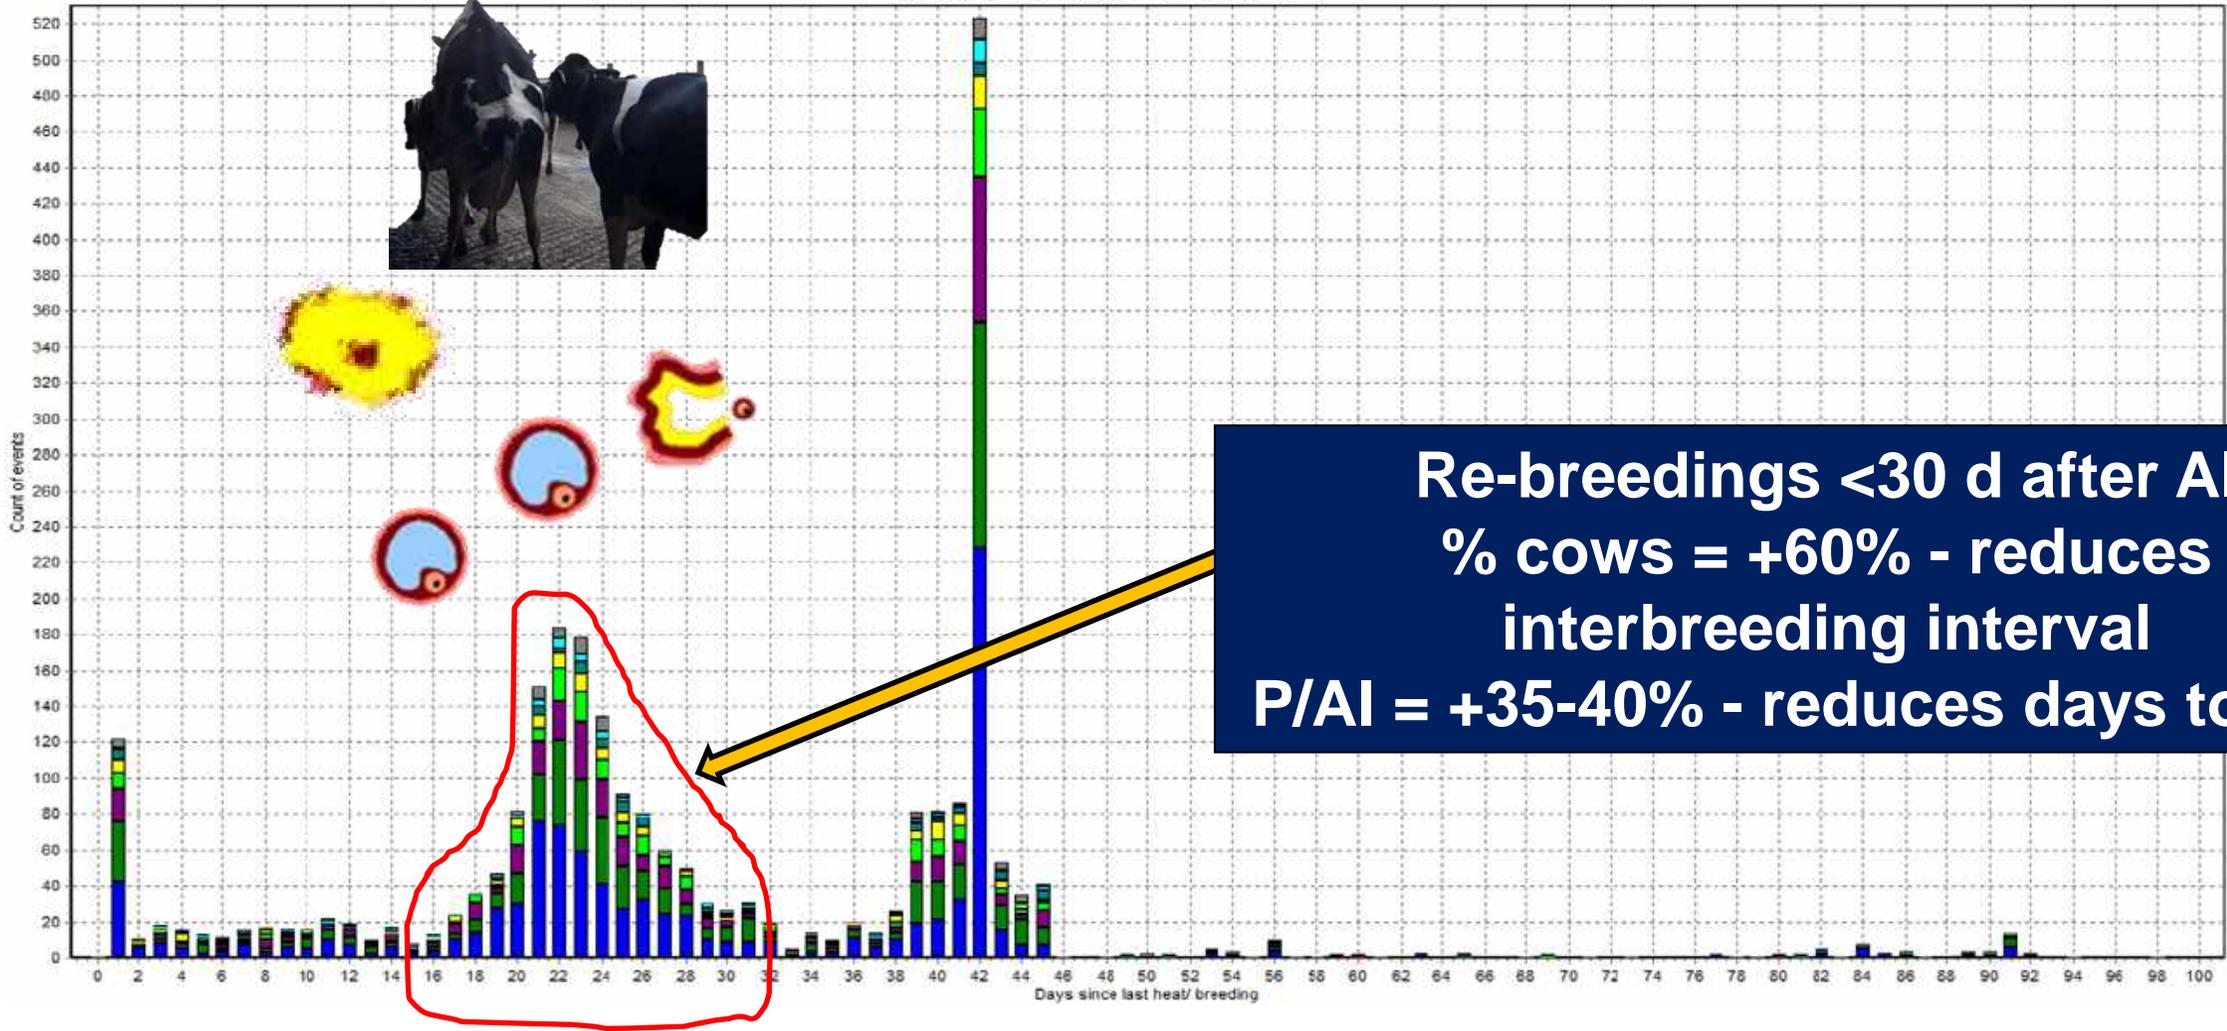

# Treatments for 2+ AI Based on Ovarian Status

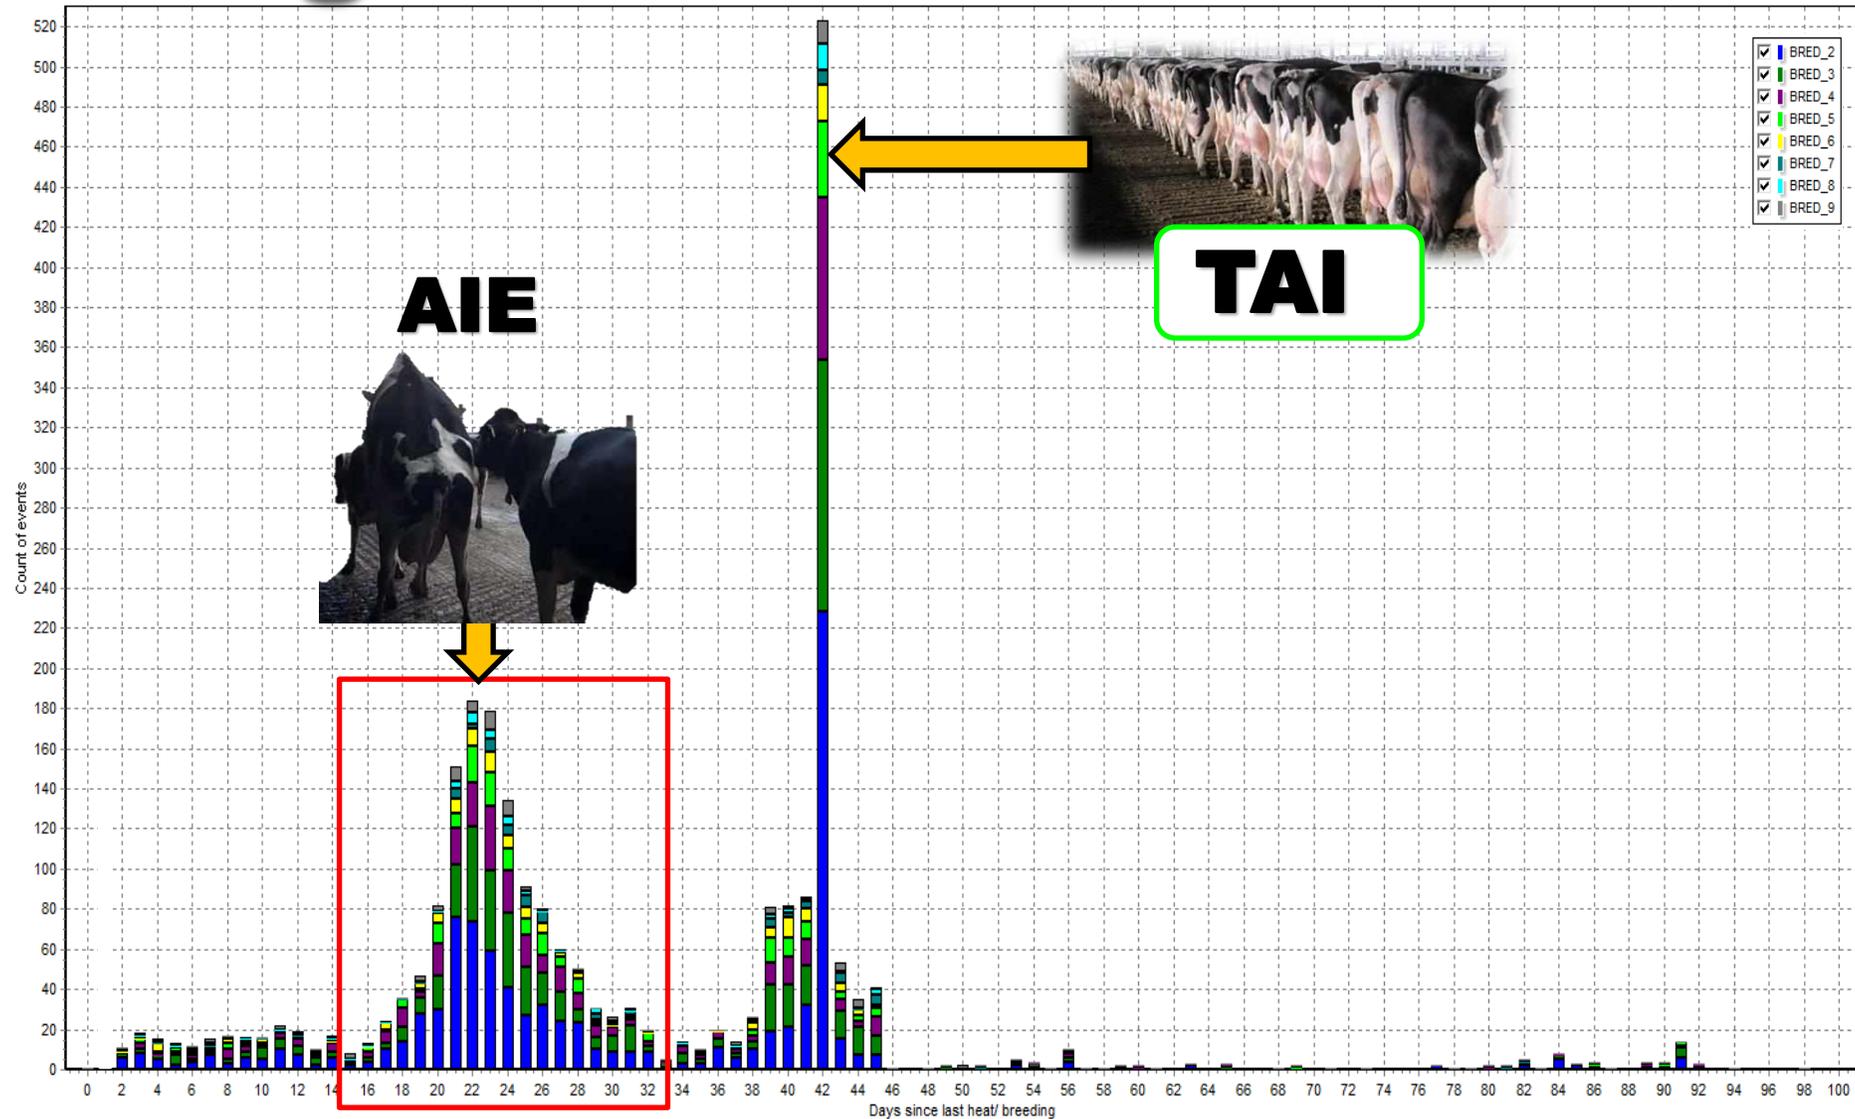

- ✔ Improve P/AI of cows with no CL at GnRH or PGF of Resynch
- ✔ Reduce interbreeding interval without interfering with AI at detected estrus (AIE) + increase fertility
- ✔ Maximize insemination of cows at detected estrus through induction of estrus after non pregnancy diagnosis (NPD)

# AI is fastest, cheapest, and easiest way to re-breed non-pregnant cows

[BRED] EGRAPH EC-5 FOR LACT>0|HW1N23456789T100

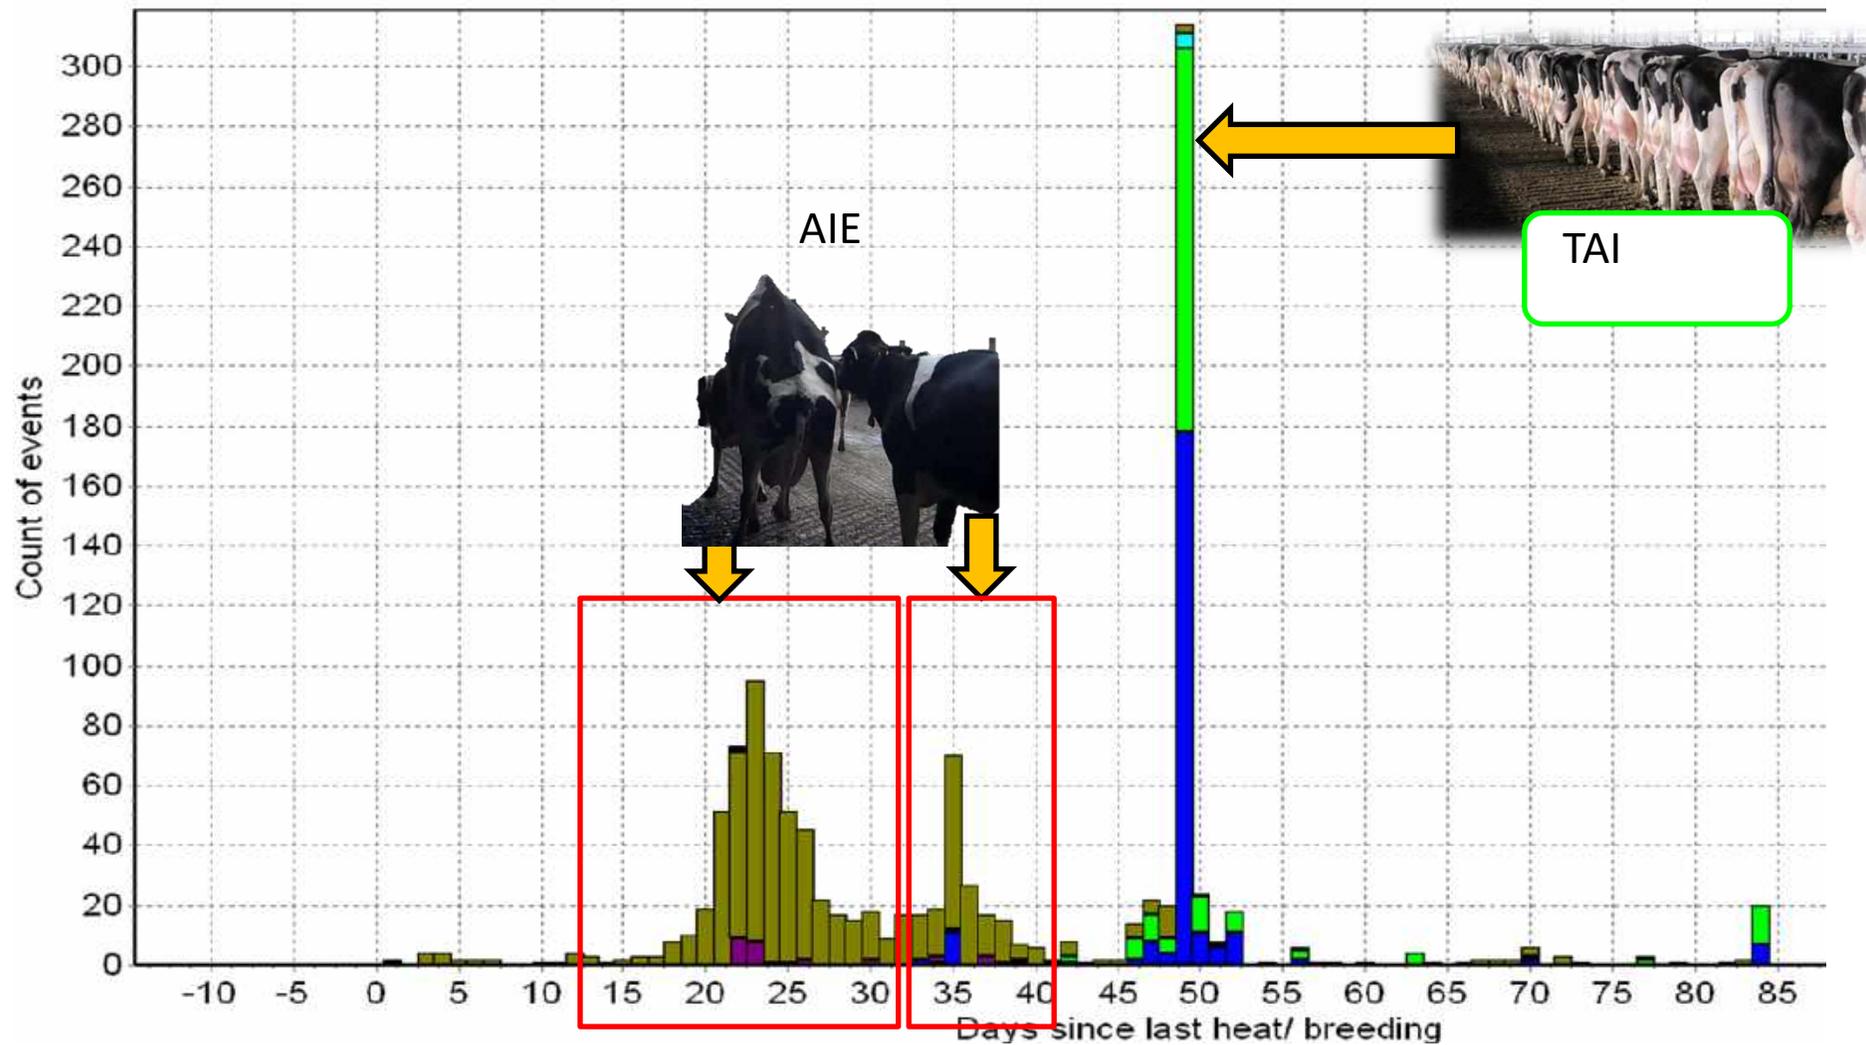

# Increasing AIE for 2+ AI

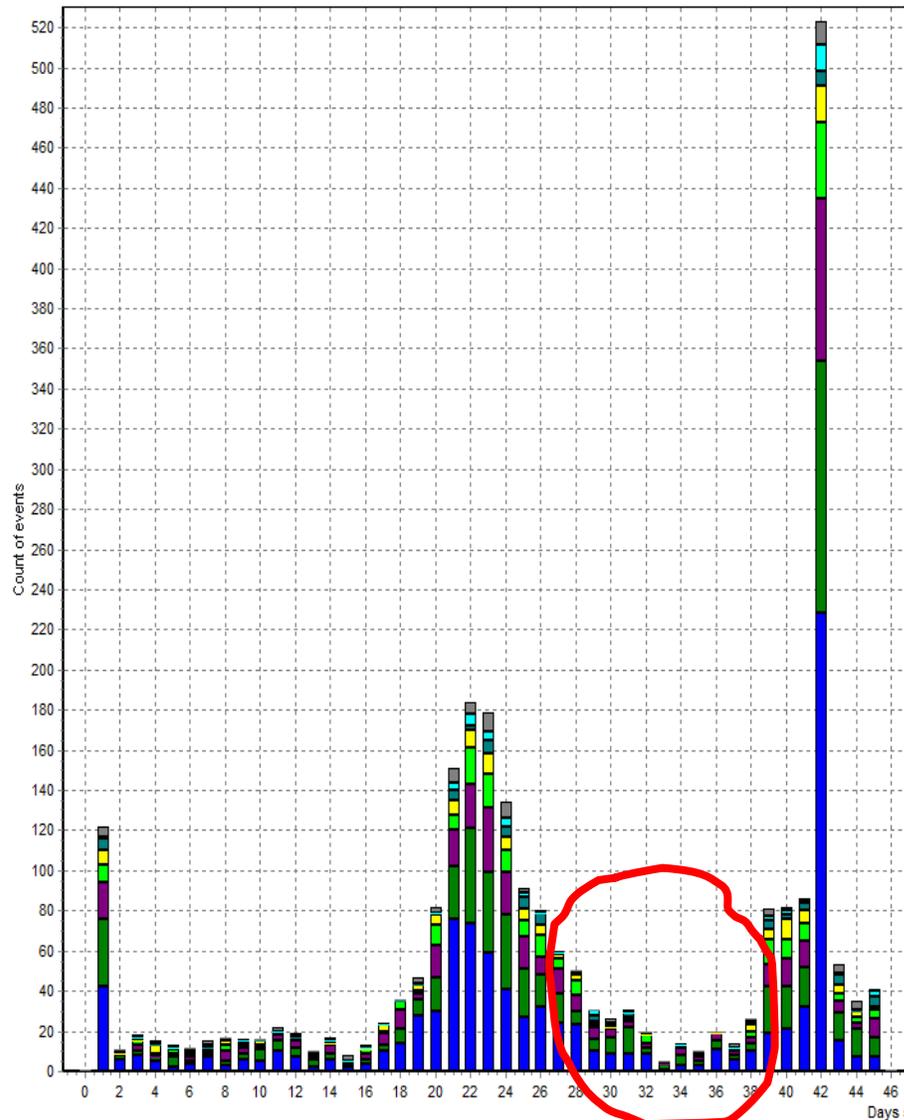

# Increasing AIE for 2+ AI

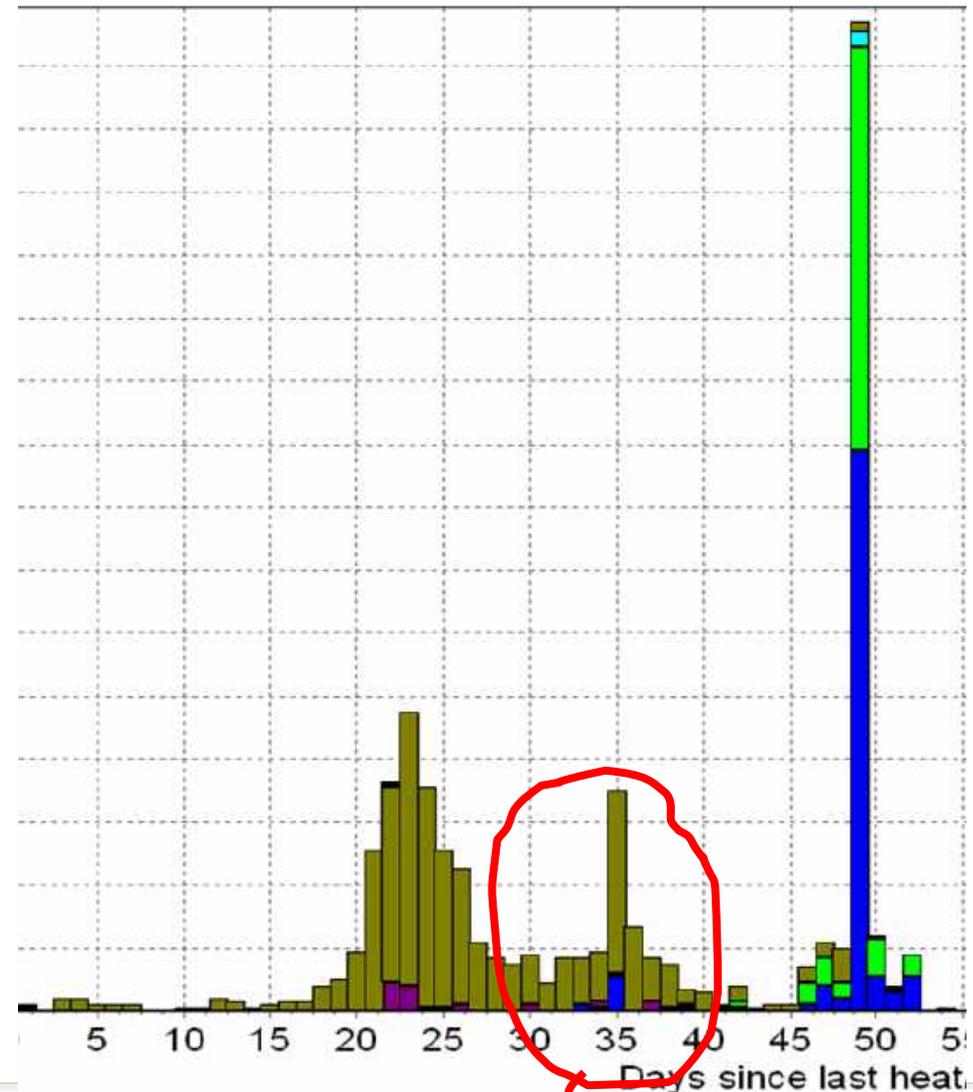

EGRAPH BRED FOR LACT>0 1HW1N2345T100

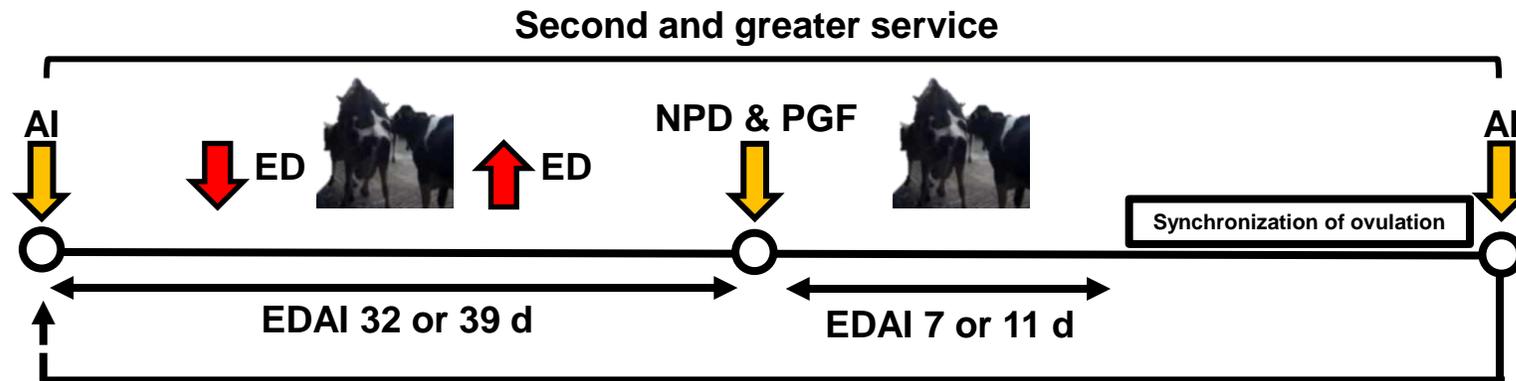

# Increasing AIE for 2+ AI

EGRAPH BRED FOR LACT>0 (M)

# Use of PGF at NPD Increases AIE For 2+ AI Services

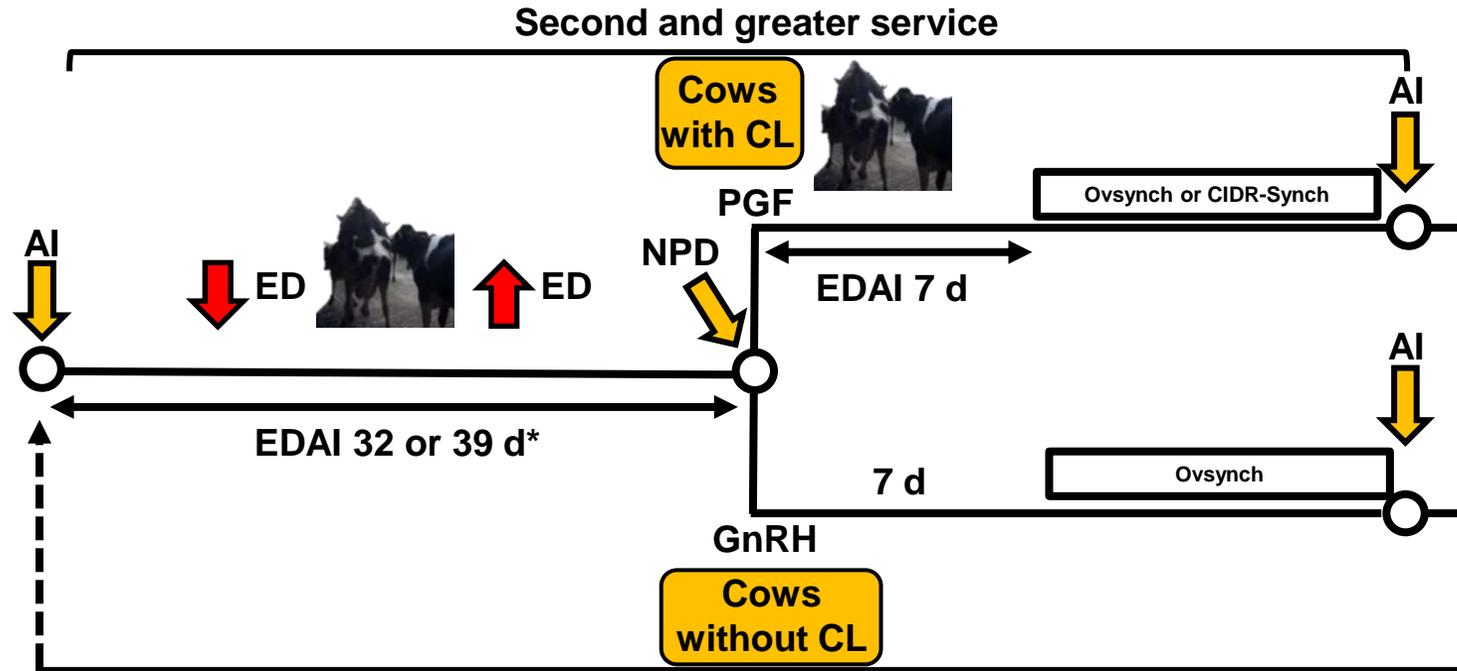

## **Key facts:**

- increases cows EDAI after non-pregnancy diagnosis**
- treatment NOT adapted to cow physiological status**
- must use synch protocol after PGF treatment**

# Use of PGF at NPD Increases AIE For 2+ AI Services

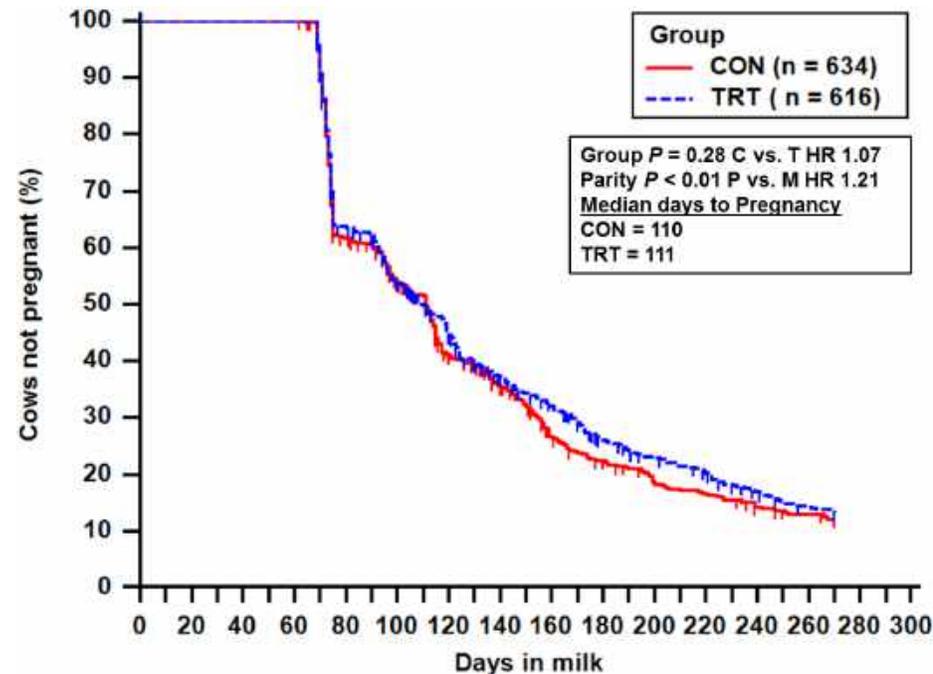

## Key facts:

- increases cows EDAI after non-pregnancy diagnosis
- treatment adapted to cow physiological status
- must use synch protocol after PGF treatment

# Programs that Increase AIE for 2+ AI Resulted in Similar Performance than AIE + Ovsynch

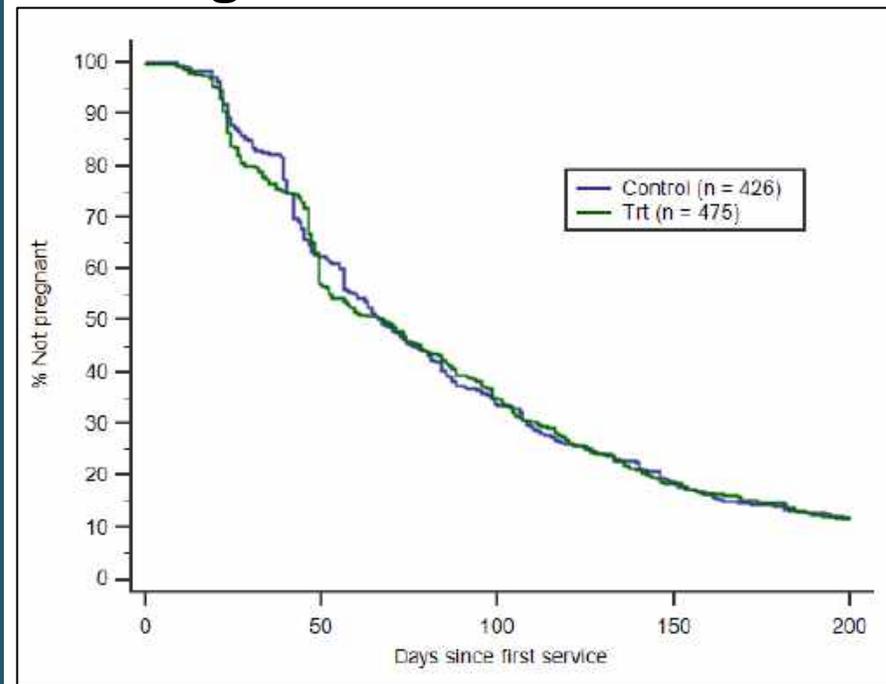

**PGF + AIACT + TAI** based on Ovarian status versus a **Day32 Resynch**

- Same time to pregnancy during lactation (Giordano et al., 2015)

**PGF + EDAI + TAI** based on Ovarian status versus **Day32 Resynch** for CL cows + **PreG-Ovsynch** for NoCL cows

- Same time to pregnancy during lactation (Masello et al., unpublished)

# 2+ AI summary

- 🐮 **Basic programs work but may not be most effective**
- 🐮 **Have several options to optimize programs based on ovarian physiological status**
- 🐮 **Choice of program based on primary goal(s)**
  - 🐮 **Maximize P/AI**
  - 🐮 **Reduce interbreeding interval + optimize P/AI**
  - 🐮 **Maximize proportion of cows AIE**

**Thank You! Questions?**
